## A ALE

## A.

A.

. ${ }^{7}$The first letter of the alphalhet in almost every Enowo langnage. This, doultless, is owing to the
great simplicity of its sound, it heing the letter which is most easily and aaturally yittered by the organs of speech. In the Contineatal :nd Oriental langnages it varies less than io Euglish, where it has at least 4 distinct sonnds, koown as the hing or slender, the broal, the short or open, and the middle as in wame, cull,man, futher. In Granmar, A is styled the fudefinite article, and denotes One or any ; as, a man. In Music, $A$ is the nominal of the 6 th oote in the gamnt; it is also the name of one
of the two natural moods, athl is the open nute of the $2 d$ string of the viulin ly which the other triu e of the -d and regulated. In Laric, $A$ denotes a universal aftirmative proposition; and in Algrbra, $a, b, c$ are nsed to represeot known quantities, while the last letters, $x, y, z$, ar generally taken to denote unknownquantities. Asannmeral, $a^{\prime}$, among the Greeks, denotes 1 ; and with a mark under it, $a$, lo00. With the Romans, a signibed 500 : and with a short horizont in line over it, $A, 5060$. In trials of criminat canses annong the Romana, $A$ signified absol+o, I acquit ; and was hence caltent hitera saluturis, the saving letter. When put to bills of exchange in Engfind, $A$ signifies accepted. A 1 is a symbol by whicb equipments are in an efficient comlition - are known and registered at Lloyd's for a certain thamber of year after being Luilt. A A A, in Cuemistry, signuies amalqama, to mix ; and in Pharmuccy, $\bar{u}$, or $\bar{i} \bar{u}$, denotes that the proportions of the ingredients to which it refers are to be equal. $A$ is frequently used as an abbreviation A.C. for Ante Christum, before Christ; A.M. for anno munct, io the year of the worli,-and for ante meridian, before nomis, se

ACAL
ACAN
and is oent in Abyssioja by the Coptic Lishop of Alex-1 acaca'llas, A. A shrub bearing a flower and fruit like those of a tauarisk.
Aea'cia, n. [Fr. from Gr. akozn, to sharpen-many of the species having thorns or pricklem.] A very extensive gedne of trees on shrabiby plants, inlsabititug the tropical parts of both the old aod new world, and, in a very few instances ouly,extealing into temprate latitudes, This geobs beloggy to the aat, ord Legumin sa, or Fubucar, Fome of the others yiulds a large quantity of tanuin, which in the form of an extrant, is aunailly inported froun Van Diemen's Lanil in considerable quintity; the species from which this snlustance is producedare chiefly Acacia decorrens anol mathissinde. As objects of ormament, they are nsmally of striking beanty, and it maty be donlited whether, in the whole veretalile kiogdum, such a brilliant coloriog, and elegant foliage, combined with a most glaceful aspect, and are fonod united in the same individuals. Gineral character of the genus. Flowers polyganous; calyx, with either 4 or 5 teeth; petals, either or 5 , sometimes distinct from ench other, sometimes in number from 10 to 2010 : pod, port separating into mang in number from to to 200: pond, ort separating into matay joints: juichlea, two-tatver. Some sprites have that are twice or thrice pindate, with a moltitude of toinnte, shining. or, at least, eved leaflets; others linve, in a perfect state, no leaves, properly so called, bnt, in their stead, the leafstalks eolargu, and assume the appearapce, and no donbt niso the fonctions, of true
leaves. Nirarly 300 species are known, tud aboog the most remurk, ble are:- Ieaciu catechu, (Mimaza calechu, Linn.), a tree fond in monatainons places, priacipally in Bengal and Cromandel. 1ts onripe pods and wood rela, (Sur Cuticad.) icacia sraluica, the mum-arabie trees, sa inhabitant of the Eant Indies, Arabia, and abyssinia where it forms a tree thirteen to fourteen feet high, ot inelegant appearance. This is one of the platuts thit yielit the usefol sulistance called gnm-aralic, which is prodnced by wounding the bark: after which the sap runs out, and bardens in tran-parent lumps. See Gcx.) - fcacia pubescens, downy acsacia, a native of the east coast of Now Holland, and one of the most beautiful of greeu-leaf plasts. It pruduces a vast abundance of yellow blossoms, which weigh dowa the slender gracefal brauches, and perfome the air with a faiat but pleasant odor. - Acacia julibrissin, the silk-tassel acacia, light, airy foliage, and for the great beanty of its cluslight, airy foliage, and for the great beanty of its clus-
ters of lilac flowirs, the long and slender stamens of which struan in the wind, and glitter in the sum, like a number of silken taisels artificially fastened to the honghs. This species is common!y cultivated in tempurate parts of Encope and America-Cultivation,Most of the species taty be maltiplied by cottings stack in silver sand. placed uader a bell-glass, and lept in a Warmi place, to which no direct solar light has access. Others, and amoug them Acacia julibrissiy, have the power of produciag shoots from pieces of the root placell in earth io a hot-bel, and by these the nurser
mes generilly propagate them.

sharpness to the taste.
Ae'ids, n. pl. [Lat. acidus, sonr.] (Chem.) A numerous and important clast of chenical bodies, which are diatinguished by the property of combining with basces to form ealts. (Sce Bases, und Sulss.) They are genernilly sour to the taste; in most instances they have a great affinity for Water, and are soluble is it; they redules nearly ali the vegetable blnes; they nnite with metals and their oxides, alkailies, and earths. It wiss long held that oxygen was into the composition of the greatest number; but it has ato the composition of the greatest mamber; antince that in very many cases the acidifyin principle is hydrogen. It has consequently been considprinciple is hydrogen. It has consequently been considformed hy oxygen, and hydracids, formed liy hydregea. These, again, are subdivided into anhydrous acads, or acids without water, and hydrated acids, or acids containing water. According, bowever, to the latest researches of chemists, all acids are hydracids. The acids furnished by the mineral kingdom are termed mineral ucids. Metallic acids are formed by the combination of oxygea and a metal; and organic acids are those which coutain carbon, or are formed with organic substances. In the yent French chemists Guytoa de Murvean and Lavoisier the mineral acids are designated by an alljective formed ont of the name of their elements, and terminating in ous or ic; than, sulphurous scid, phosphoric acid, inplyiag that they are formed the first of sulphar and oxygea, the second of phosphorus aad oxygen. If the acid he formed by hydrogen, the term is commenced with hydro; thus, hydrochloric acid siguifies that the compound contains bydrogen and chlorize. The two syllables ous and ic affixed to the names of acid compounds, indicate two different mudifications; ic always denuting an acid which contains more oxygen than the acid whose name ferminates ia ous: for example, sniphoric ac:d has for its It was first thonght that a subetance could not form with oxygea more than the two above-mentioned componnils ; bat cases were sulsequently discovered whercin a substance was found to make with oxygen as many as five different combinations. Ia order to distimguish these combinations from the othere, it was fuazal necessary to employ three prefixes horrowed from the Greek; for example, hypo (ander), hyper (above), or briefly per (in the highest degree.) Thus, hyposulphurous acid is ata acid coupposed of sulphur and a smaller proportion of oxygen acid than sulphnrons acid; perchloric acid contains more oxygen than choric acid, dc. (For forther details prganic acids, which are much more numerons tinan the mineral acids, rad which all contain carbon and hydrogen, a harge proportion of oxygen, and some nitrogen, these chegular nomenchat among the mineral acids, sul pharic, sulphurons, hydrosulphuric, nitric, phosphoric, arsetious. arsenic. chromic, hydroftuoric, hydrochloric, chloric, iodic, carionic, boracic, and silicic; among the organic acids, formic, hydrocyanic, oxalic, acetic. malic, tartaric, succiaic, beazoic, citric. \&c. (See those words, Acids are extensively employed in mediciae, principally

Al'ams, Joh $\times$ Qurver. Fith Pros, of the U . States, and nne
of the or the greatest of Amprican orators, diphomatists, and
 at Bruintree, Mass., July 11, 1767 . Taken to Elur.p.e by laris and Levilen, and at the age of 1t waw arppented Paris had Leyden. and at the age of 14 was appointed
private sec. to Francia Dana, theal Americun Ministerat Brivate sec. to Francis Dana, then Americun Ministerat peace signed at Paris. lixs, and then rebded fir some time in London. On his return home, he gruduated at
 Boaton bar in 1791. Ife suon tucame known as an athe
publiciat by a serica of essays that appeared in the Boston
"Centinel," in which he insisied upon absolnte peutrality being oliserved by the U. S. in the war then raging
between F'rance and (ir. Britain. In $179+$ be proceded to Hosland as minister; and in 179 it Berlio. where he megutia ed a treaty with the Prussian gort. In 1803 he was elected U. S. senator, and in lkos appointed professor of rhetoric at Ilorvard. In 1607, discarding his Federalist ties, heallied himself to the Demecratic p: rty, and by 80 doing firfeited his seat in Cungress, la 1809 he was ap-
pointed ninister to Rusein, and in $1 / 13$ was named ode pointed ninister to Rusoin, and in $1 / 13$ was named one peace with England In 1sli he proceeded to London as peace with England. In 1815 he proceeded to londou as appointed sec. of state nnder Mr. Monroe. In this uffica apponted sec. of state under Mr. Monroe. In this ulice he distiugaisued himseif spechally by his arrangement of the ceded territuriea of Florida and Lomisiana. Io 1825, no one of the candidates to the presidency having received an absolute majority of the electors, the election eame ioto the Ilunse, where, owing to the influence of Heary Ciay, A, was chusid at the first ballot. Hie dministration wis marked by the imposition of a bigh tarifi on foreign koods, with the view of promoting internal industry, and by the maspecessfal attempt to purchase Cuba from patio. A. failed to secure his re-
election in 1829 . Defented by Jackson, who had 188 election in 1829. Defented by Jackson, who had 178 furtune, increased by his own efforts, afforded him an rortune, increased hy his own efforts, aftorded to Conanple competency. In 1831 , he was retarned to continued to represent natil his death. Having been chosen merely an account of his determined resistaoce to becret societies, his positiun was indeperudent of purty politicy, and correspondingly strong. The scope of this work
does cot perinit ns to dweil on the history of his condoes not permit ns to dwell on the history of his con-
gressional carrer, which would fill a volnare; but we gressional carrer, which would fll a volnare; but we
munt qutice that, in every form which the question took, he was the bold and determined advocate of abolition aronod him, and so preparing for the trimmphs which aronod him, and 80 preparing for the trinmphs which
have been won aince his death. His voice was weak, his manorr onpleasing, sud, though perfeetly self-possessed he had most generally the appearance of speaking in a jassion or ill hnmor; hut he nlways counanded the attention of his audience by the originality of his views and the wonderful rariety of his illustrations. A. was a ready and fertile writer - both in prose and verse. Ilis style is fluent, bnt has none of the vigor, elegance,
wit, and eveg genius which sparkle in his father's writ ingn. Ile kept durings hia whole lifetime a rery voluminons jonrnal, which han been partly published. Scized with paralysis while atteuding the debate of congress, February $21,18+8$, he D. two days diterwarde. Sea

ADEN
year. While he was in lreland, Stecle, his friend, commenced the Tittler, to wheth A. liberally contributed. This was followed by the spectutor, Which he also eariched by his contributions, distinguishet by tragedy of Cuco was bronight apon the stage, amidst the plandits of both Whigs and Turies. In 1716, be gou he lual coennteno-down the marriage did not provo happy. 10 1717, he became secretary of state, which happy. 10 1717, he became secretary of state, whith In 1719, he engaged in a political dispute with his old frieouland coadjuter Steele, whom, in his pamphlet of the Olet $H^{+} / i i^{\prime}$, he contemptnously otyled "Little Dicky." D. at 11 oliand Honse, 1i19. It is said that when be fonnd the pressure of death upon him, he sent for Lord Was wick, and, affectionately pressing his tund. whispered, "See in what peace a Christian cao die!" He frft voly a danghter, who died, unmarried, in $17 y^{7}$. The literary greatnes of $A$., is the estimation of his contemporaries, probably stood upon sumewhat difer placed. In his uwn day, he was looked upon as a drama pist and a poet of a very high order; but the taste whith then prevailed in poctry was the most artificial which had distioguishel any age of Eoglish liturature. The quality wheh chiefly drew admiration was a cold and monotunens polish-the warmith of genuine mature wus accounted rudeoess and harbarism. The return of the public mind to truer primeples hats been fatal both to the dramatic and to the poetical fame of $A$ His glory is now that of one of our greatest writers in prose. Here, with his delicate sense of propriety, hi lively fancy. and, above all, his most origioal and ex quisite humor, he was in his proper walk. ife is the he is still ansurpased by any who have attemplod to he is still u

"If yoo stir abrmai, go arm'd. - Arw'd, brother I - Brotber,
-To give information; to inform; to make acquainted with unything; - followed ly of before the thing told.
Advise', v. $n$. To consider; to deliberate; to weigh
Advised', p. a. Acting with deliberation, as after tak-
ing advice; pradent: ctations. - Performed with de ligeration; well-considered; dune with desigo.- Wh

Advis'edIy, $a d$. Veliberately; purposely; by design Advis'edness, n. Deliberation; prondent procedure.

Advise'ment, $n$. [Lat, advisumentrm.] Counsel ; inAds is'er, $n$. One who ulvises or kives counsel; ; counsrllor.
 Ad'socues, $a$, [Lat. adrocatra.] The wit ot pleading:
 plend an tatvor of; to support; to vindicate; to defend. Ad worate, $n$. Among the ancient komans, nu adior
cute wis a purson ekilled in the laws. The origin of cute was a pursos ekilled in the laws. The origin of
advocates in Rome was derived from an carly institu. adoustes in Rome was derived from an early institu-
tion, ly which pery head of a patrician house bad a number of dependats, who lorked us to hims as a protector, aud in retnrn owed hitu certan obligations. and client. As it was one of the principuil ard moet ordinary duties of the patron to explain the haw to hos chient, and to ussiat lim in his lawsuits, the relation was gradually contracted to this extent. - In carly pe-
rivis of the Roman tepablic, the profesoion of un wdyo ribis of the Roman tepublic, the profession of an advo-
cate was held io high estimation. It was then the practice of advocates to plead gratuitounly ; those who aspired to honors and othices is the state taking this people. As the simplicity of distingaished minvig the people. As the simphity of ancront ananuers gradnall) venal. At first it appears that presents of various kinds were given, as voluntary acknowledgments of the crint tade of clients for services rend.red. These paynuente, however, grudualy assumed the character of debis: and at length beeame a kind of stipend perionically paynble
by clients to those of the patrician order who devoted themselves to pleating. In this form, it becane a
heary oppression, and was always considured to lue heavy oppression, and was always considered to lue un
abuse, snccessively prohbited hy sereral laws, which abuse, successively prolubited by several laws, which
were over eluded. In later periods, as the Rotman law diffosed itself over a great partods, as the Korope, the reatric-
dius tions upon the pecuniary remaneration of ndwotates
entirely disappenred in practice; and the puyment of pleaders for conilacting catuses io conrts of justive vices by thuse whum derivel henefit from them. - In countries where the Komas law prevsils, ebjectally in France, (see Barazag.) the pleaders in courts of justicu
are still called advocates; their charater dutura, liabilities being extrmely sarious ander different posermments. In scotland, time facully of aderacates consists
of pleaders or counsils, admitted, upon an examitation, of pleaders or counsels, admitted, upon an examitation,
to practise betore the conrts of session, justuciary, aud to practise betore the conrts of session, justheiary, and
exchequer; they are also entitled tospeak in the Hunse of Lordsin kingland upon appals from the scotco conis.crown lawyer in Scotland. Previonsly to the union, he was one of the great state offivers, and sat in parlianment hy virtue of his office, without election. His duty is thi act as a public prosecutor, and to conduct all causes in inal cases, - In the United States and in Enghad an adwocate is usually torued a counsel, coansellar, or atter-ney-at-lawo.- A judge adrocate is a lawyer of officer who manage a prosecution in a court-martial.
Ad'voeatiewtip, $n$. The office of an advocat
Id'vocatess, $n$. A female advocate. (Ubs)
Idvocation, $n$. [Lat. udvocutio.] The act of plead Advoca tions, $n$. [Lat. udvocutio.] The act of plead-
mng; pleas; apology. tion to a superior court to call an action before them froman iuferior court. who in the Cuthohe church, shows canse against the cauvaization of a persun pruposed for sainthoud. The
advocate who defents the proused saint is called adion advocate who defends the 1 rodmed saint is called auro-
catus dit. As the oflice of the A. diabmis is to insist unnu the weak puints of the life of the proposed saint, this name is sometinues pupularly applied to those who de-
light in detracting trom the characters of goud men.Anvor. Eacy. A. [Fr, avnué, from Lat, adevcatus.] H, Alvow'son. M. [Lat. adrucutio, a summoning.] (Eng. himself in Theesaly, nnder Chiron, whose house wis frequenter by all the young priaces and heroes of the Priam's daoghter, by whom he had a soa, called Ascanius. Dering the Trojan war he belneved with grea valor in defence of his country, aud eacountered Dio of betraying his roontry to the Grueks, aud of presery ing his lifesand fortune by this treacherons measuie. He
lived at variauce with Pviam, ou nccuant of net receiving sulficient namks of distmetion from the king and his family, a circumstance which might have provolet him to seek revedge by pertidy. Whed Iroy was in flames he carried away upon hia shonhlers his father Anchises and the statues of his household gots, leading in his hatad his sou Ascamins, and leaving his wife to fullow behind. Some say that he retired to Muant Ida, where he built a fleet of twenty ships, and set sail in quest of a settlement. Strabo, on the contrary, says that Encas never his postouity handred yeurs after the 'Trojau war, says that the fouds destined Eueis and his posterity to reign over the Frojans. Accordiug to Virgil and other Latio authors ha wiss sailing from sicily to Italy, when he landed in Epiras, and was drived ou the costsis of Africa, and received by Dido, queen of Carthaze, to whom, on his first iuterView, he gave one of the g.armonts of the beautiful Heled. Dido being enamourud of him, Wisheel to marry him; but he left Carthage by order of the gods. lu his voyage he passed to Cume, where the Sibyl coadncted hin to hell, that he might heserfroni his father the fute
which awated him and all his posterity. After a voywhich awaited him and all his posterity. After a voy-
age of seven years, add the loss of thirteen ships, he arage of seven years, adad thess of thirteen ships, he ar-
rived in the Tiber. Latinus, the kiug of the councry, received nim with hospitality, anil promised him bis daughter Lavinia, who had been before betrothed to king Turaus by her mother Amati. To prevent this numriage Turnus made war against Eneay; and after Datay bat tles, the contest was terminated by a combat between
the two rivals, in which Turuns waylilled. Eacas marfed Lavinit, in whice hopor he built the town of L.tvihium, and succeeded his father-in-law. His reigu was but of short duration, various accounts leing givell of the cause of his death. -. Eue.st has been prased for his piety and submission to the will of the gods. Tae story of the loves of Dido and. Eneas is allowed to be a mere poetical
ism.
E'reid. n. [Lat. aneis.] The celebrated prem written uy Virgil io the time of Augustus Casar, which relates the wapderiags of Eneas alter the capture of Troy, his riage with Itariu, and his adventures previous to his mar coesists of twelve books. The first six cuntain a description of the waderings of the hero; the others, of his arrival in Italy, and the war hetween the lrojans aud the nattives. It was commenced nbout B. 0. 30 , the athor continuing to lavor on it till his death, a. c. 20. It called forth the enthusiastic admiration of his contemporiaries. Propertius wrots:

Yield, Roman poets; tords of Greece,
The Hiad soon shall own a greater lay
and some writers, even in modera times, have expressed that cumpared with the lliad, the Eneid is watio in originality and power: it is evidently the labored performance of a learned man, possessed of an eleg.nt miod who has availed himself freely of the labors of those who have precedted him. The strength of Virgil laty in the pathetic rather than in the sullime: and many passages of the Eneid, which admitted of the former quatity, are exquisitely beautiful. The $E$. has been frequently trauslated in Eaglish, but the energetic version of Dryden has nearly superseded all others.
A'eng, a village of British Iudia, province of Bengal. esir it is the hest pass into the Burmese domivion
Eolian, a. [Lat. oolus, god of the wind.] Belonging SEolus; acted upon by the wind.

Eo'lian harp, or Eolds' HLRP. A well-known in strument whic produces a pleasant combiaitina suunds, by the action of the wind. Its construction is very simple, consistiog of merely a number of catgut or wire striugs, stretued io parallel liges uver a hox of thio deal, with soundiog-holes cut is the top. The strings being tuned in uuison, the effect is prodoced by placiag the instrument in a curreat of air. Tbe unven-
tion of the Eolian harp is gencrally given to Kircher tion of the Eolian harp is gen
by whom it was first described.
Nolians, the aams of oue of those various peoples whation of Greeks. We trace the name of Eulins to Thessaly, their primitive aloode, ns fir as we know where they appear to have been closaly related to the Phthiotic Achæans of the same country. The Achei of the Peloponnesus were kiosmen, and, in fact, part of the Đolians; and the great emigration, commonly called the ذulian, was ad emigration of Achæan people. It seems probabls that the emigration from the 'Yeloponnesus commeaced before the Dorian invasion, or returu of the Heraclides, as it is often called, which caused so great a revolntion in the Peninsula. Strabo says that the Eo hau settlements in Asia were four generations prior to
those called the Ioniad. The Eolian colonies on the Asiatic maia land were widely sprend extendian on leat Irom Cyzicus along the shores of the Hellespont and the Erean to the river Caicus, and even the Hermos. Hany positions io the inturior were also occupied by them, as well as the fine island of Lesbos, with Teoedos, and
pare of smaller inpportance. Homer mentions all these parts as ponsessed by a diferent people; which would settlers came after his time. There were twelve cition or states included in the older sectlements in that tract
of Asia Mlinor on the Fgend, whicll was of Asia Mlinor on the Egend, which was known in Girech
geogaphy by the name of Folis, and formod a part of geography by the name of Folis, and forrow a part of of them, whin-l early fiell intur the hamls of ther Ioninam
 old spot, with exactly the salue name thes uluine we to the many instances of the turable iapressiong wade hy tireek colonists wherever they settleel. But hesides these twelve states, to Whe

AERO

Ae'rides, $n$. pl. (Bot.) Sce Air-plants.
Ae'ric, $n$. [Fr. aire.] The nest of the eagle and other Aeriferons, a. [Lat. aur, sir, and ferre, to carry.] Conveymg or contaning air Aerifiea lion, $n$. [Fr.] The conrersion of a substance The act of uniting air with some thing; the process of ering fillel with
eriorill, a. [Fr.] Having the form or nature of air A'erify, v. a. [Lat. aer, air, and fucere, to make] To ito air ; to fill or combine with
Ae'rius, an Asiatic presbyter, who from Leing a follower of Arius (the founder of Arisiomp), adivocated the nowiod that there was no ditibetion between birhops and preshyters, and procured many followerd, who were named
Aeriana. Flourished in Selastih, Pontus, in the tin centary.
Ceirnen, a little town in the centre of Valais, Switzer-
land, on the Rhone: 7 miles N.E. of Brieg.
Aerodyuan'ics, n. pl. [Gr. uer, uir, sod dynamis, power. $]$ The science winch treats of properties of aeri-
form flinids in a st.te of motion. - The causes which disturb the quiescence of the sir are very unmerous. Carrents are crested in innumerable wiys; nationg others, by the local change of temperature induced by thu presence or alisence of the sun; hy the permanent difrereace of temperathre betwece of polarand equatorial regions; and by the rotation of the earth on iss axise
lt is afed rivers. Aqueons vapor being much lighter thau the sir, causes notion in its passage to the cloun-reagion.way of affecting the wellbeing of mankind. It is now provel that it is quite possible to prelict the blowing of wiod from any particnlar quarter; and by atero-dynatmic calculations, we are able to forward telegrams to
different parts of the cuust, warning sailors of coming different parts of the coust, warning eailurs of coming
etorms. The laws which govern projectiles are an im-etorms.- The laws which govern projectiles are an im-
portint part of this ecience. We will try to give of them a clear iden. - Conceive a body to be moved forWard in a etraight line, displacing succesaively the par-
ticles of air opposed to it: the effect which it prudnced ticles of air opposed to it: the effect which it promares
is proportional to the nomber of particles against which is proportional to the number of particles against which
it strikes, and to the quantity of murtion communated to each. Suppose now the velocity of the body to th air displaced whill be twice us great as before, and twice as many partucles will reccive the impulsion in the same time. Hence we infor that the effect will be four times as great, or that the effect is pryportional to the equare of the relucity. This result of theory agrees toleraily wek with experiments mule to determine the resistance of the air when the velocity ie not very great, or not oxceedinf eiftht ir mine hamired fect in a second. Wheu fied by circumstanotes which require further explumafied by circumstanes whicl require further explama-
tion, When a houly is noved out of its poeition, the tion. - Whenit buyy is mored out of its position, the spously, lut only after a sensible, thuyph very short lim.. Theory, confirmed to a certain degree by experience, slows that nit, under tho ordinary atmuspheric pressure, ru-bis iato a vacumm with a velocity of 1300
and 1100 feet in a second of time. But thin velocity is and 1100 feet in a necond of timo. But thin velocity is
epeedily checked; for the inatant that nuy portion of epeedily checked; for the instant that niy portion of
air is admiteve, or the vacumm ceass to lo perfect, that portion resists tho entrawe of more with a force proportional to its donity. Suppose, for example, the air
in a receiver to the riviluced to onic-ourth of its natural densi $y ;$ it is clear that the velosity of the etir to enter the receiver, which is proportional to the synare
noot of the efl.ret or the reistace, will be reduced io the propurtion of niwut luo tos 87 . In this manuer, as
the air continnes to coter, the velucity will rupidly dminish. - Now, con eive almenly, for exampleacaponhall, to bo moving rapidly thropigh the airir, but with a lens velucity than 1300 feet pur seonil. The nir in
front of the ball will remain in its natural state, hecause the condenastion produced every instant liy the contact of the bull is propagated mare quickly than the bail movers, the volucity of the propagator being squal to
that with whin air entera a vaccum. But thete io curtain mpuee tehinit the ball fa which tho nir his not less rurehed, the bali having pussed throught it in Jese time than is reqniriol fir the nurroundine ner entirely arikes from the commanicathon or motim ta the jnerti
 quence of which, wo maty infor that ther resishanre will

his luld treal for a stone, as he alept in a field, dropped Upue it a tortuise, which instantly killed him. His inayination was stroug but wild, vast in its couception, but
greatly draling in imprebabilities. The olscurity of bis greatly dualing in inprebabilities. The obscurity of his
style is admitted, and an excellent modrre cratic has prostyle is culmitted, and an excellent modera critic has pro-
noanced him the most difficult of all the Grvek classics.
Escula pius. (Myth.) The got of medicine, son of $A$ polIo and Arsinue, daphthter vi Le acippus. A poilo brought huntiog. In the former he acquired it hish deyree of skill, go as to surpass eveo the fause of him teacher. He nut only prevented the death of the living, but even recalled the dead to bife. Jupiter, howeyer, indacid ly the cumplaints of his lirother Mato, slew Escnlapius with a thuuderlolt. After his death, he reccis ed divine honurs. Esculapits had twe sons, Machnon and Publifitis, who were called Asclpiades, and duriog the Trujan war made themselves $H_{y}$ ns as Hygeia, Iaso, Punucea, and Egle, the first of whom was Worshipped as the goddess of heatth. Escuilpilis is ro preseoted withnt arge beard, holding akautty stall, ruand cence. Near him stands the cock, the nymiol of watchfulness. De is sonactimes crowned with the harel of Apollo. Sometimes his little son Tede-phorns is represeuted beside him. with a cap upuo lis head, wrapmed up io acienk. Sometimes also. Feculapius is represente
under the image of a serpeat ooly
Is'enlin, or E-courv, n. [Frona asculus.] (Chem.) A crystalline fluorescent sabstauce obtained from the bark of the horse-cbestout and other trees of the geterat asca-
lust and Paxia. It forms colorless, needle-shaped crystals. It is inodorous, has a bitter taste, is soluble in water sod alcohol at the boiling heat, and nearly in-

chestnat, B genus of plasots, ord. Sipiaduceis it coosist of trees funod in the temperate parts of America and Asia, reoarkable for the beatuty of their flowers and leaves. It must not be confonaded with the Escalas of the Rumans, which w:is a kind of o:k. The popular name of horse-chestntt, which apphrtains to the .E. IIippocastaonm, (a native of Asiil, but now knww throaghont Europe nad in this couarry, has ariven frum the custum amony the Turks of grioding the nuts und mixing winded. In Frsace, large quantities of starch are obtained from the seeds, but put fiverably received in the trade. A pectliar oil, which is suid to he a wonderful reasedy
seeds.

to this acquaintance with the coast, the Portuguese io course of time, formed varions establishments in the space lying between the scoegal and the Gambia, along the banks of the Zaire, and in other parts of Conge Finally, thas nation very soon, also, establishod themselves alonge the east coast of $A$. by the conquest of
Quilou, Melinda, \&c., from the Arabs, 1505 . - It is said Quilou, Melinda, de., from the Arabs, 1505.- It is said that in $1: 36$, long before Cape Nun was passed by the very fir to the south of that cape but all thase cestab very far to the south of that cape, but all these estabThe Senegal. Su-veral journcya foto the interiur were ambertaken by the Freach resideuts at the month of the Scncsal ntout the close of the 17 th and the commencement of the 1sth century. The most important of these were the voyages of M. Brue. who ascended the river kenegal as tar as to the cataract of Feln. In 1714, M. Compagnou snoceeded in the perilons under-
takin: of visiting the kingdom of Banthonk; and thu takint of visiting the kingdom of Bambonk; and the
kingdom of Gatlam, which vccuries the space between kingdom of G.tlam, which vecnjies the space between
the Senegal und the Sahara, was early explored by the the Senceral and the Sahara, was early explored by the 4. Were also early nade, in imitation of the Porturnes aud French, first by the English und nfterwards by the Dutcis. But no considerable progress was raide till the first journey of Park, 1795-174t, who, passing throngh the kingdoms of Bundou, Kasson, and Kaarta, reached Sogo. the capital of Bambarns, and there beheld the Niger "flowing slowly to the eastward," Park advanced leyoud this point to snother town named Silla, on the same rivir, and retnrned to the Gamhia by a more sontherly tract, following the course of the Niger as far as Bammakoo, abil thes proceeding through the mountainous districts of Manding, Konkodoo, and Din-
dikoo. Oa a second expedition, which was nidurthle dikoo. On a second expedition, which was undertaken at the expense of the Engligh goverament, 1805 , this these dangerens enterprisus there sppear, in sncce sion, the names of Capt. Tuckey, who ascended the Niger for shont 280 miles; Bowditch. who in $1 \times 17$ explured pats of the territories of the Fantees and the Ashantecs: Clappraton, who in 182s reached sackatod whore he died; and Rirbard Lander, who in 830 snc cented in discoverigy the month of the Niger. since this period several expeditions have been sent into this regios, but they have been attended with indifferent sucress; indeed, the sickly character of the clinute has in geocral proved fatid to the explorer. - The zeal for seat also ont ancousion of traveller to explare the southera rerions of that vast continent The priucime settlement in this quarter, that of the Cape of Gual Hope, was founded by the Dutch about 1650 , and taken from them liy the British is 1806 . For more that hnadred years this colony occupied only the extreme angle of the $A$. continent. The first traveller who penetratad any considerable way into the ioterior was Capt. Heari Hop, who was followed by the Swede Sparrnun, and by the French naturalist Vaillant whose jonrneys were made letween 1775 nad 1785 , and extendid to the territory of the Bosjesmans, three or
four hundred miles north from Cajne Tuwn. In 1836, Aulrew Smith sucaled the Caftrarian monetuins, in 1836 , $1833^{\circ}$, Capt. Alexander traversed the conntries of the Numayuas, Bosjesmans, nod the Hill-Damaras. In J8t9, Ur. Liviagatone departed on bis first journiy, ind it is hy him that the greatest contrihations heve leen nuale to our geographical knowledge of southern Africa. 11. has disclused to ns the trite country of the negro Itace, traced the vast Kalahari dusirt, tracked the conrab of the Lreat river Zambesi. discovered lakes N"gumi, Nyusia, and Shirwa, and indicated new fields for comp-
mercinl entorprive. After him Stanley (p.2318) ndded greatly to onr knowledge of Centrnl Africa by his (exuhurations ubout Luke Tumpanika mal subsequent jour ney aerass the continent of A., prosing the ulentity of

## MAP OF AFRICA.

Africa, the aecond in point of magnitude, the least civilized, and the most nuimportant in political influence of the great divisions of the globe, is an imnense peninsula connected with Asia by the Isthmus of Suez, and is the only continental portion of the Old World which passes into the Southern Hemisphere. It is separated from Europe by the Strait of Gibraltar and the Mediterranean Sea. The continent extends from Ras el Kerun in Tunis, lat. $37^{\circ} 40^{\prime} \mathrm{N}$., to Cape Agulhas, in lat. $34^{\circ} 49^{\prime} \mathrm{S}$., a distance of 5,050 miles,-its great mass thus lying within the tropics. In breadth it extends from Cape Verd to Cape Guardafui, 4,600 miles. The area is estimated at $11,300,000$ square miles,--about three times that of

Europe. and more than $1_{1}^{1}$ th of the entire land-surface of tho globe. The population is conjectured to be wbont $185.000,000$, about $\frac{1}{2}$ of that of Burope, and less than that of India. This gives a supposed density of 16 persons per square mile. The area and popmation of the various rogions stated in the following table are, for the most part, extremely uncertain. The information is rather more reliable in the cases of the British Colonies and in the states of Northern and North-eastern Africa.

The scale of the Map is 460 miles to an inch, one square inch compris ing 251 times the area represented by one square inch of Map of Englard

TABLE OF AFRICAN STATES AND DIVISIONS.

Various Estimates of the Populatwon of Africa,-Weimar Almanach, 101,500,000; Prof. Dieteriei of Berlin, 200,000,000; Dr Behru of Gotha, $188,000,000$.

## AF゚RI

Under the equator the direction of the monsoon changee, uad becomes s.W. To these winds are to be ascribed the heavy falls of rain that drench the exteosive phains
aud asceudiag groends of the cast horn of A. Further and ascendiag groends of the cast hora of A. Firther
inland they are brokeo wy the great Abysinian Cubleinland they are brokeo uy the great Abyssinian tablelands, so that they do wot extend beyond the strut of B.ab-el-Mandeb, S.E. of Whicha areat laif of rait conse queatly occurs; to the N..., on the other hatud, ncarcely any rain falls. The S.E. mousous does not stap in the Tchad und Kordefan; in both regwos its influences begin to be felt in Hay, or ane mouth later that on the IV. Heman Species. - The southern rugions of Africa re occupied by two nations, the Hottruterts and cafjer. The Hottentots occupy the surtherapart ol Cupe Colony atul the Lavin of Orange river. Tucir profite is hideous, and their foot is so siagtalarly formed that they can be tracked by their marks. They are certainly the must indoleat, helpless, and dirty of the haman havily. Tbe cuffres differ botls from the Hutteatuts and those whe of rounded limb. In the wistol arts of life the Cuffres ar far above their Hotteatot neighbors. They extend from Natal, on the suutheru cosist, iuto the ituterior, probably as far as the tropies. - The most widely extealed race in A. is the Neyrn or Exhnopion, observilig that under thas natue we uaderstand only the irue becre ricet, which. whatever resemblance thoy may beir to the other dark races of Africa, still blffer from them considerably in physical charicter athd pengrapluich distribution rieties of language, shades of couplexion,
ameng them. yet we must recognize the whole Ethiopian race is forming a thstinct nad widely sprend fanuty. Beis the supthera limit of the arid deserts, we find a race is the sudthern limit of the arid deserts, we find a ra the wuolly fair, black okin. the profle of the face aud forebead, the olsique insertion of the itucisive terth, the form of the pelvis, and the legs, we sce the andualited characteristics of a ruce peculiar to the A. contincot Negro from his localities in $A$., it is difficult to $8.1 y$ what parts of the continemt must be considwred as his proper comntry, but it may be safely assumand that the Scgro
is on his nitive soil in all the regions that extend irom is on his nutive soil in all the rugions that extend frour
Senegal southward, alhur the guif of Guinea, anul south of the equator as fir as the sixteenth deyrece of lititude border pa sondoo snarm with itmumerable tribes of nixed races, aud lising a wambering life. They are net Arabs, but they have adojited the religion of of the desert are the Tuanghis. - The monntain regions of the Atlas, as well as the whole shores of the Muditerranean from the straits of Gibraltar to the Cyruatic regions, have beeu subject to the ilwasion of conyuerors ever since the earliest perieds of bistory. the flumucian, Greck, and
Roman, X:umbls and Goths, and Aribs frotu Asia, bave at ulfferent periods pusocessed portions of these regions and ruised their blond with that of previons races. The Arab invasiou has proluced the most pertuanent effects, Atlas region and the towns on the const, aud are geaerally knowa to ns hy the incorrect appelation of Moors and Berbers. - The ruling race of A whara and Tigre,
who are included nuler the name of , hyssiniuns, must either belong to Arsbic stuck, or if they be considered as a separate, thay arcs still a nearly related family. It is probable that the various perples who occupy the widely spread Alyssiman provincus contain many varieties of
the human species, the remmats of mations become ex tinct, or the result of the intermixture of different races The Arab race, which numetimes has mingled with nugr and other races, now occuples a large part of the counthe popniation of the Nile basia is of a very motley

character. The Copis, or descendants of the Egyptians are reduced to a sonall numbier: and of all the conqueror or settlers in Egypt, none have stamped their physical followers of the Prophet. The Mohammedan religion has spread over at least one third of the continent: and
tome of its precepts and practices seem well mbapted to

Win the favor of the indulent and plrasur-loving ne

 precepts are 2 a sll underotuod un they are olneyed. The
 indeed scattered as far weot as the hagglom of Moricey
 of tis sithars. - The Asubse in ther usly clumater that or how used is Arrica lis theme whow wish ta read and Write, cacept thuse emphoyed by the people of Tiges nim dan, where it is only great dectore whe sum roul and

 hearl; in the regions of Alystinis, the Ture and Ams hara tongues prosal. The liogamges of the thatka are ss moltitarious ins the nations. In suhara alone, 43 dia cots to hespuken in were burdly mequainted with in V. Zuïnsis. - Ia the abitual kinghan, A. scems irher than any otlier timiter of the ghom, If con eninacrute five times us many plecirs of qualrupeds as A sia. and thric tuens as muny as all Americal It extedx Aigantic giraffe, and largs thetelequs and ap"s. That giatu of binds, the ortrich, is ex lusirely imbligntens to Africu But the mest beacficel gift of nature th the African is the camel. the constitution of which is in every respert allepted to the comntry und clituate. Or the quanrmama. ther, are 5. spech-s, atheng which the matat intereatiog is the Chimpanzec, and the no-t wonderfils tho for Among theother animais are the than hant ami rhinuceros the lion, fointher, lenparl, ounce fackal, hyena, wolf, fos dog, cat moogus, bit, rit, marnwt (combl caprnsis), hare rablitit, ferboh, porenyiue, beltachog, mole, civet-cat, ich-
 merable varieties of the gazelle, the buffian, fallow-dedr. prds, whose natural history has been as yet by an means

sufficiently investigated; even the jroblematical unicorn is still said to exist in the interior. The varieties of birds ir'- Eqnally numerobs: among whichis the crown-ind. kingtishor, Jeliman, abd nany kinds of parrots: the pea-
cock, partridge, phealabt, widow nud cardinal-lird; the cuckoo, the corvlusindicator, turthedoves, pignous, ducke grese. \&e. The class of rentlles comprian the croedile and formeconstrictor, witt, thany other serpento, sume innoxions,others hikhly puisenons. The Luys anii) rivers abmand in fish. lut the varlecty of the specirs is not se great at in the worthernseres, atad many of the most nseful are entircly watang. The shirnbs and earth swarm with terbitez, ants, scolopendras, spiders and caterpilars,
while possing arnies of locasts olocare the sun like While possing arnies of locusts obscmre the
clouts. The tuost lusutiful insects abount.
clouits. The most lusutiful insects abount.
VI Bor iny. - To the traveller who pasea from the II Borisy, - To the travelier who passes frobe the
sonth of Eurege to Tingier, the appearabe af the Africata catist 1 tresents What hus has ert in Europe: an mimilarity contiunce to he preacrvel, that he may fancy hinself ytill in South Spain ir Italy: But as soom as the clanin of Athae is passed, the scene begins to change; the exeexsive dryness of the clionte of the northern lurdins of the Great lhesert ie surb, that few trica, exiept the dato, cha manintain an existence, It is how vor. in this arial region,
where rain sedom falls, that the groves of date palme form a sercea impervions to the rays of the king, and Chrivh lwarath thrir shade, the wrange. the lemot, the peangrabate, and the vinv, the iatter of whe h rlimis to drils. Althongh reared in constant ehate, nll these fruits acy aire a more deliciou, flavor than in what wond seem a more favorable climate. - In Fgypt, the Einropean plants legn to disappear; in the districts still watered spring months of Barlury: alandance of rice, barley. and wheat: rich firhle of engar-rume: olives, firk, rines and plantains that have bern intronnced: while in the
botter or dricr, or arore southern, the date as the chief

 The $B$ eren fife; violent, savage, and warllke. It. Thi
state of things. 5. The Iron Age, when justice and Age of animals. The
Age of animals. The duration of life in snimals is generally between 7 and 8 times the period which
elapes from birth tiil they become sdult: but this rule busides leing varue and indefinite, is quite nscless in practice because it affords no scale of grndation which wonld enatite us to ascertain the precise sge of indisiduals, the only inumiry of real importance or of practical application to the intereste of buciety. Mure certain and scientific principles are derived fom observing the grow th and decay of the teeth. Lnhappily, the abservations have nut been till now extended luather than to the poost important domestic aminuls. - Hirse. Its age is known procipally liy the ap pearance of the incisise tecth, or, as they nee technically called, the nippers. Of tbese luere are six in each juw, uroad, thing, in the centre with a hollow diok in the adnlt animal. The foul or milk teeth nupent filteen duys after birth: at the age of two years and a half the madalle jair drop, and are reptaced by the curremponding peraunent teeth: at three. ears and a linlf the two next, one on esch side, fall, sud are likewise ruplaced; and st the age of fonr years and a half the two exturnal incisors of the firkt bet drop, and give roum to the correbuonding pair of prmancont teeth. All these permanent hippere, as we have atratady obscrved, sre flattened on the crown or upper surface, and masked in the centre with a circulsr pit or hollow, whis h is gradualily delacedith its lottom. By the deuree of this thetration, or wearing of the tecth the age of the uninul is deterwined, till the richth year, ut which posiod the manks sre kenerally eflacenl; fut it is to be oliserud that the extermil fucisors, as appeariug a year or two after the intermediate, jre serve thair uriginal form proportionally for a longer porive. After the eiphth yenr, the age of the horse bity fe still determined for a few sears longer ly the uppemance und comparative length of the canine tect or tushos. These, it is true, are sometimes wanting, yarticulariy in the lower jnw, nad in mares are rareth develuplite all. Those of the under jaw appear the four; age of three years and nishr, and to tos they appear blunt und long. bint niter this period there are no further meatue of julging of the horse suge, excepting from tho cumpuntive ize, blunthess, nod tiscolored yupear ance of the tushes. - Uxem, shec) g, guats 1 he uge ol the horned cattle is indicated more readily by the growth of horms than by the delrition and baccession of the eeth. Their horos consist of a hollow slienth of horn, whith covers a bony core of the sknil. and growe from the root, when it recraves ench yrar nu atdinomil kno of righe the number of which is sure thes apot to nimat age.
 fectly smouth and without wrinkles, limt ufterward ench succeding yur adds a rige to the root of the horn, 50 that the nge is dutermined by allowing three years for the puint or swouth part of the hurn. and one for each of the rinks. In sheep nud gnats the smoth, or tup part, counts lut fir whe year. ue the horns of these amnanls show their first hnoth, ir ring. in the second year of their Hect- - hie mpe of other charese of mamals camnot be determined liy nay general rule.- In Birdis it may be soms-times tone by olverving the form nad war of the hill: nite some pretend to distingmish the of of firte nu cunfidence.

Age of l'lants. Plants, like animula, are subject to the laws of nuortulity, and, in many cases, buve the perfon of their existrnere determined in mature wexpally to amamal nod biennial plants that a precter period of durntion in fixed. The remainder of the more perfect part of the vegetable kingelom, whether burbaceous, or

## AGE

AGEN
$\Lambda G G R$
theso modes is to increase, when young, in diameter, rather than in length, until a certain magnitude is which is never muterially altered. The addition of new matter to a trunk of this kitud takes place by the insinuation of longitudinal hiores into the inside of the wool near the centre; on whieh account, such trees are called Endingenous, or Mimenentyledons. The other mode is, from the begioning, to increase simultaneously it
length and diameter, but principally in lebgth. The length add diameter, but principally in length. The
addition of new matter to a trink of this kind taken addition of new matter to a trunk of this kind take place hy the insinnation of longitudinal fibrey intu epace beneath the hark, hind on the outside of tho wood, near the circmmference: ondyledons.-There is scarcely any well-nttested evidence of an eadng aons plant huving acquired any considerable age, Bud, in fact, the ing acquired any considerable age, and, in to preclude the possilility of their existing besond a definite periud of no great extent. The diameter to which their trank finally attiins is very nearly gained before they legin to lengthen, and afterward nll the new woody matter, which every successive leaf necessarily prodnces during its development, is insinuated into the centre.
consequence of this is, that the woody matter previn consequence of this is, that the woody matter previonsly toward the circumference + as thas action is coustantly in progress, the circumference, which in the luprinving was suft, becomes grailually harder and harder by the pressure from within ontward, till at last it is not susceptible of any further compression. Alter this has occurred, the central parts will gradnally solidity which thrusts outward the older wood, till at lust the whole stem must become equally hard, and no longer capable of giving way for tree will perish: becanse its vitality is dependent
npon the full action of all the functions of the leaves, and the cessation of one is the cessation of all. - But in exogenons trees, as in the oak, it is quite the reverse; to
thest existence no limited duration can be assigned; on the contrary, there is nothug physically impossible in the notion that soms individuals now existing may even have beed
silent witnesses of the Noschatin deluge. In conseachain deluge. In consewuody matter which is constantly formed by the leares of such treee being insinuated beneath the bark near the circumference of their trunk; and, eecond, of the bark itself being capable of indefinite distention, no compression is exercised hy the new parts upon those previously furmed; on the contrary, the bark is incessantly giving way to maks room for the wood beneath it, while tho latter is, in consequence, only glued, as it were, to what succeeds it, withoat its compreatent degree of vitality resides; in the old wood greatest degree of centre, life, in time, becomes extinct; but as each successive layer jossesses an existence in of great degree independent of that which preceded it, the death of the central part of an exogenons tree is by no means connected with a diminution of vitality io the circumference. The last cylinder having its own indep udent vitality, it will be apparent that, under circumstances constantly favorable to growth, individuals of this kind may continue to exist to the end of time - The way oy

AGRI

A complete bistory of Agriculture would he the true history of mankiod. To give a connected and even imperfect acconnt of the practice, statistics, and history of agriculture in nll conntries, would be ioconsistent with the general plan of this wo k, and of little
uee to the reater. We shall. therefore, limit ourselves uec to the reater. We shall. therefore, limit ourselves io eur country, which would not lind place nuder other beads; pointiny out the pritcipal divisions, in which Agriculture of the Erited Skstes. -The vast territory of Agriculture of the Cuited Sutes. The Vast territory of
the United Statea presents every variet- of aoil and climate. Its agricuiture embraces all the products of European cultivation, fogether with some of the warmer countries, as cotton, sugar, and indigo. The agricultural implements are, in miny respects, similar to those of Great Britain and Frauce. But as in general rule, those of the U. S. exceed all others in their wonderful mbptation of machinery for all purposea of caltivation and barvesting of cropa. So successful have heen our farmiog implements in repeated contests oo Europenn sonl, only impeted by the greatly increasing demand at home. The dispoaition of the American to experiment to test afleged improvements, and adupt lator-saving expedients, gives a grest inpulse to the genius of faventors, as may be neen by the oumber of agricultoral patents graoted, which was but 43 in 1847 ;
while in 1866 they increased to $177 \%$ and duriog the while in 1866 they increated to $177 \%$, and duriog tha years ending with the last decale, have atill more won-
derfully iucreined. This nental activity of the Amerderfully iucreased. This nental activity of the AmerIcan firmer, no mach in contrnst with the blind opposi-
tion of the European countrymen to any inuprovement. sion of the European countrymen to any inprovement. is owing, in great part, to the auper or intelingeace
of the foriger. In Europe, land in lear and latior cheap; but in the United States the reverse ia the case, cheap; but in the United states the reverse ia the case, his own interest, to endeavor to maske the best of his land; while the American has the sanoe ioducement to reduce to the lowest possible minimare the proportion of manual labor emplnyed in its operations. Unhappily, this priaciple is too uften carried to a disuatruus extreme. A man, posseasor of a large estate, with reduced mesane, believes it oecrasary to scratch over the whole, when hie assurance of awcess would be to concentrate hit tion of soil, quitud as a warning in the reporte to Congresa, in the cheaphess of Western lar is, the origidal price of which bears auch insignificant proportions to their intriasic value, that the owber, after having overtaxed the soil for immediate reaulte, deems it cheaper to remove to new lands, than to sustain and increase the productive caparity of hie present farm. One result of this error in the removal westward, year lyy year, of the cootre of wheat production, thun r hling tranepor tntion and other charges to its ultimat., cont, threatening to render export next to imposalble. Bnt the imtua or fertilization of sull is, that, with land conserva richer tiann that of Euromeman countries, the aver age proluction in America remains far below that of any conntry in Europe. The average yield of whea per acre in America wan only 11.5 for the year 1867 when for the yoar Inhe, which was not a favurable ouc the nvernge yield of wheat was 17.27 in Germany France, Belgium, and Ireland.

A'sua Frin, in Oalifornia, a post-town of Mariposa co.,
A'ypa Fria, in Nro Moxion, a village of Santa F6́ co. NHe, $n$. [Fr. aigue.] (Me b.) Au intermittent fever anccession, atteuding earch p, moxysm, and tollowed by an interiaission. They are of three genera: 1. Quotid ana, in which the paroxysins return at the morning, at an interval of ahout 24 hours; 2 . Tertiant, in whict the paroxysins come on at midday, with an interval of about ts honrs; 3. Quartuna, in which the paroxysma hours. Eich paroxysm of an inturmittent fever is divided inte three differeut stares, which are cailed the colli, the $h \cdot x$, and the awe thing stoges, or fits. The cid stage commences with lapguer, a sense of debility, and slaggishness in usotion, frequent yawuing and stretching, and un aversiou to food. The face and extremitis's becume pile, the features shrink. At leugth the gatient feels very cold, and universal rigors come on, with pains in the head, back, loine, and joints, - nansea and verniting of bilhous matter; the respiration is small, frequent and anxious;
seosibility is greatly impared; the pulse is amall, frequent, and often irregnlar, and the shiverings terminite in is umiversal ams couvalsive shatiog. aymptoas abating after a short time, the second shge body, redgess of the tace. dryness of the skin, thirst pain in the head, throlbing int the temples, anxiety, und restlesnaess; the respitation is fuller and more free, but still frequeut; the tongue is furred, and the pulse has become regular, hard, and foll. If the attack has been very severe, then perhaps delirium will arise. When these symptoms have coatinued for some time, a moisture breaks out on the forehcad, and by degreea becomes a sweat, and this, at lenoth, extonds over the whole boly. As this sweat continnes to flow, the heat of tie boily abates, the thirst ce.ses, and most of the functions are restored to their orinairy state. This coastitates the third stage. When the paroxysins are of short du-
ratuon, and leave the intervils quite free, we may expect ratuon, and leave the intervias quite free, we moly expect a speedy recovery; but wirn they are long, violent, and may be deabtful. Marsh miatsid , or the effluvia arising frem stagnant water, or marshy ground, when acted upon by heat, are the most frequent causes of this fever. Persons expused to a climate in which ague prevails endemically, muy most effectually preserve themselves by carefully avoiding sudden ehanges of temperature, and the uightand moruingrir, and by the conztint use of flannel clothing. The first olject in the treatment of this disease is a change of residence, without which the best of this fever is its very slight causes, as from the prevaleuce of an easterly wind, even without the repetition of theeriginal excitit; cause. But the most corions and inexplicable in this disease is its property of periodicity. During the intermissieo, what becomes of the malady? Why, after a specilic interval, does it uniformly recur? We have not
advagced a single step toward the elucidation of this
mystery.

## AIR

AIR
AIR.
voleler, and other philosophers after him, have proved that the air is a mixture of two gases, oxygen and nitrogea, with a small proportion of carbuuic acid, and
aqueous vapor. The two last are considered as accidental ingredients, and not constituent parts; as well on ac count of the smalliness of their quautity, as because they occur io different proportious according to the locidity aod weather. Latimated by measure, air is found to coasist of $20 \cdot 81$ oxygen to $79 \cdot 19$ nitrogen; or. estimated by weight, $23-01$ oxygen to 76.99 nitrogen. The air, in common with all otier bodies, has werght. inis is provelby weighing a bottho byice, contaios air cate balance, and then by repeatiog thl process anter the Accordiog to Biot, 103 cubic joches weigh 31 grains that is 8000 times less than water. Heat cabses air to expand, cold to contract. The cupping-glass is a fumiliar instance of the former fact. If a bladder is half filled with air, aud held near a fire, it will expand until the bladder is quite full; on beiog taken awiay, it cootract gradually to its former bulk. Air being elastic aod com pressille, it follows, that the higher we go, the lighter the air becomed. (For a fulter explanation of this, see Busumeren.) Air dissolves a definite amount of squeuus
vapgr at different temperatures, heoce the sudden formavapor at different temperatures, heoce the sudden torniaa blue tinge. The distant hills appear of this color, from beiog seen through several miles of air, and the sky appears blue from the same cause. As stated above, air consists of oxygen and yitrogen. Were it composed of oxygeu oely, we should breathe away our bodies too fast, while nitrogen alone would kill us. By this mixture, proper strengtan of air necessary to life is kept up. The perfect mechanical mixture of the two gases which form air, is an excellent exsmple of the diffusion of gases When two gases are united, they gradually mix with each other uotil perfect difusion takes place. The air therefore, that io asion that soulyzed at its summit though it differ materially in density. Conbustion takes place io proportion to the density of the sir. A candie, weighiog an ounce, takes a longer time to burn at the top of a high mouotsiu than one of the samesize and weight at its bottom. From this it follows, that human beings must breathe slower in valleys and quicker at greater altitultes. The air is beiog continually readered impure by the breathing of ammals, the oxygen it coutains belog transformed iuto carbouic acid. This
however, lasts but a short time, being quickly separated however, lasts but a short time, being quickly separated into carbon and uxygen by plats, wher retain the latter ner body for their awn ard for animal life. This art. refers only to the cheroical and mechatical properties of air the name ATvisphere. - See also, Acoustics, Balloon Combustion, Ox yuen, Respiration, dc.
(Mus.) A piece of inusic, composed of a certain number of melodious phrases, united in a reguiar symmetricill form, and terminating in the key in which it began A melody. - As enuployed in music, the origin of the the constituents of music. A compositios important of plete with learned and iugenious harmony, may abound in fugue, in imitition, and all the contrivances of acisnce, but without good melody, will never appeal to the beart, and sel lom afford aoy gratification to the ear. - In music composed for the theatre, aod which is constantly introdaced into the concert-room, are the following varieties of air, desigaated by Italiao denominations, Yiz. Aria di bravera (he performer dis plays his powers of execution, and seeks rather to as plays his powers of execution, and beeks rather to as
tonish than please. Aria di cantabile (singing oir), tender, pathetic air, calting forth the expressioo and taste tender, pathetic air, callogg forthetere (chusacteristic air), which in distinguished by force and eaergy of expression and by dramatic effect. Arus pariante (spcaking air), Which is rither declaimed than sung aud is best scited to the bnfy, or comic performer. - An air varié [Fr.] is literally an hir with variatioas, but this name is often given by a composur, arranger, or perfort
dy fancifully varieg itusl and emliellished.

AIares, the nume
Iares, the mume given by the Romans to a kind of militia; or, sccoriling to somse, to the cavalry stutiuned
IIarie I., king of the Visigoths; the least harbarons of all the conquirors who ravaged the Roman empire and the first of them whe gained possession of infpori
Roms. Under lis gaidance, the Visigoths, the divinion of the Gothic nation to wbich he belongel, issued fron Thrace, where they lad been settled, and overian Greecs, A. D 396. Alaric took Athens, but he was soon com pelled by Stificho to evacuate that conutry, and to re turn into Epirus. About the year 398, Alaric, on the ground of his high military chatructer, was prochairard king of the Visigoths; and just about the sime time Arcadins, the successor of Theodosins io the Fustern empite, Mismedersts with those of the Empire by declarny him master-general of the eastern Illyrian prefecture thms he communded a large part of the vast cenntry situated hetween the Damulo, the Adriatic, and the Black sen The Visigoths who oleyed his orders had tew. clains to the civil character and stability of nation. They threatened both empires equatly at the s.me time, and sold their alliance to each alternately Alaric at last determined to make his way into the elmpire of the West, for the purpose of establishing a king dom by conquest. - In 403 be appesred before Milan, which was iommediately evacnated by the Emperor Honorms. Completely drom Italy with the repuains of wis compelled to retire from He now anbmitted to the Emp. Wonoring, entered into his service, and for three years seems to have surved this priace in Epirns. For this he demaaded an extravagant reward, piainly iutimatiug that war would be the consequence of a refusi The demand wits made io the year 408. The mivority in the senate were for war, but by sislichos advice, it was determined to buy off the eneny by a contribution of $\$ 100,000$ weight of goll. While the Visigoths were it the foot of the Alps, the cowardly and weak Ilmonorius procured the aseassinstion of stilicho, the only man who could still have defended the empire. Those histleft their wives and children in the Roman cities: they left their wives and chaldren in the Roman citiss: they
were nil massacred at the sane time. A, advanced with his army and invested Ronne. An application for terms was made on the part of the Romans, with an intimation that if unce they took up arms they would fight desperately. $A$. returnel this pithy answer: "The closer hay is pressed. the more easily it is cut." Ite deasinded ail the wealth of Rome The ambassulurs asked whit he would leave to the iohabitants. "Their
lives." Ile at leugth. however. consented to retire, on lives." 118 at leugth. however. consented to retire, on condition of receivitu a heavy ransom, Ravena, with a view of putting an end to the war; but the parties conld oot ayres, and $A$, besieged Rome a second time, io tirs. The iapposing name of the Eternal City seemed to inspire the barbarian with iovoluntary respect. It was otherwise pledged, by erecting a new emperor in the person of Attalas, prefect of the city; but the weak ness of Attalus rendered it necessary for the Visiguth conqueror to ando the work of his own hands;
Hlanurins was reinstated on a powerless throne. 11-unorins was reinstated on a powerless throne. A

aharacuer of their country, and the iraperfect state of
toeir civilization, however, render the Albanians foes to the arts of peace generally. Their trale principally consists of exchauging the atamal productions of their owa forts. manalactured goods of other conatries.- inhabiapruag from the Llyrians. They are an active, muacul tar race, seldora exceeding five feet six inches in height, and capable of undergoing great fatigue. Their faces are long and oval, thear noses sharp, thao, and straigit, rarely a black. Their attachmeot to their mountains rarely a black. they all carry arms, it is difficult to diatiagnish the peasint from the suldier. They are mostly robbers, a professioo amogeg themselves nut coneidered disgraceful. Their womea are tall and strong; but as they are kept in great subjection, and viewed in the hight of cattle, they are made to labor as minch, and
are often unamercifully used.-Hest. A. was furnerly an independent kiogdona, goveroed by its own priaces, the last of whom was the celebrated Georges Kistriute or died in 1466 or 1467 . A. was coaquered by the Turks in 1467. By the treaty of Berlia (1878) several districts of A., measuring 661 sq . m., have been annexed to Mon-tenegro.-Rel. The filhabitants are, generally, Chris tiatus, of the Oreek church, bat many are Mohammedads. Pip. 1,300,440.
Albandan, n. A aative of Albania
-a. Belonging or relating to Albaoia
Albano, a town of ltady, in the Campagns di Roma $14 \mathrm{1a}$. S.S.E. of Kome. Pop. 6,000. It was built oo the site of the villa of Pompey. It stands st a short distance from the lake.
Lake of Alb

Lake of Albano, situated to the N.E. of the above town; it has the form of ao irregular ellipse, and oceupies probsbly the crater of an extinct volcaoo. Eels of Onmease size, and higliy esteemed, are bank of the lake is Castel Gaodolfo, the cunntry residence of the Popes. The $A$. Lake is $\bar{i} \mathrm{~m}$. in circumference; its surfice is 919 feet sbove the level of the seah and its depth about 1,000 feet. An emissary, desigred to prevent the sudfen ovarflowings of the lake which threateued the plain below, was constructed by the Romans 9. © 39t; and it remains uninpatired to this day,-a striking monnment of the genius and perseverance of that extraordinaty people. They bured the mountan for the space of more than a mile, mostly sbout four feet in breadth. It was completed in less than one year. The water of this emissary flows into the Tiber lielow home.
Albano Moantain, or Alban Mount, to the E of the above lake. It is about 3,176 feet is height. The view from its snumit, extending over Latium, is one of the most magnificent that can be imagined. It is the Mons Allanus, now Monte Cuno. It was crowaed by a
temple in honor of Jupiter Latialis, where bacrifices temple in honor of Jupiter Latialis, where sacrifices
annually were offered up by doputies from the varloue Latin States, to their common father and protector. Al'bany, Lovish, Countises of, thaghter of Prince
berg, of Gedern, io Germany, B .1753 , married in 1772 , the adventurons Charles Edward Stuart o v. The countess adventurons Charles Edward Sthart, $q$. $v$. The countess being minch yougger, the mateh was ill assorted, and she
retired to a conveat. Subsequently she weat to France retired to a conveat. Subsequently she weat to france,
bat on the death of her husbani, in 1585 , she settled in Floreace. Hure she secretly allied herself ty marriage to Count Alfieri, the poet, taking the title of Countess of Albaoy, as the relict of the last of the Sttarts. Alfieri died in her house, and ia 1810 she erected to his memory, is the churcb of Santa Croce, a monument executed hy Canova. She whe possessed of a refined mand, loved literature aod the arts, and while iu Florence, her house Was the resort of
persons.
D. 1824 .
Al'bany, Alsaivy, or Albiny, a name anciently given to the ILighlaeds of Scotland. See Alsion. - The titl of Duks of Albany was conterred, io 139 , on the Urother eecond son of Kiag James 11.; on Ileary, Lord Darnley on Charles 1. aod Jimes 11., when iofants; and on Frederick, second soa of George III. Prioce Cbarle Edward Stnart assumed the appellation of Count Alban as au incugaito title.

Atter the murder of Perti nax, he was elected enpuror by the soldiers in Britain. Soverns had also been invested with the imperial dig nity lyy his own army; and these two rivals, with about 50,000 men each, came into Gaul to decide the fate of the Empire. severns was victorious, and he ordered the head of $A$. to be cat off, A. D. 198.
Abiniss, Betanard Stegrried, whose true name wale Weiss, (White,) b. at Franktort-on-the-Gder, 1696. Inetructed liy his father, Beraard. Who enjoyed a gow reputation as professor of medicine, ho was hiniself nostomical platus, in 3 vols, folio. 1744,1749 , and 1753 prove him to have been one of the greatest anatomint that ever lived.
Albion, the oldest name hy which the island of Great Britain was known to the Greeks and Romans, Greni Britain and lreland ware known ly the general appellation of the Britannic Islands, while the forber wat dee ignated by the particular mame of Albion or Alwion, and the latter by that of Lerne, Lonerona, or Erin. Casar does aot use the word Allion ; his name for England is Britannia. 1liny says (iv. 16), "The name of the islund pic." The word Allinn is still the only name by whill bic. Gaels of scotland desiguate that country by which word signifies in the Gaelic language, white and fair island. The word alb itself is not now in use in the Gaclic, but is probably the same root that we find in the latin edjective alb-us, and in the word "Alps." The tormination inn signifies island. The name of Allion was probably given to England by the Gaels of the inposite coast, who conld net fail to be strnek with the chaiky cliffs that characterize the nearest part of Kent. Suma suthors derive it from Albion, son of Neptune by Amphitrite, who, aceording to his fatbulous history, canse into Britain, established a kingdom, azd first introdnced at the mouth of the thene with stopes throw was killed ter, becanse he opposed the pussuge of Hercules. la per, $r y$, A. is still used for Great Brituin.

Raymond Lully, Roger Bacon. Arnoldus de Ezlla Noxa. Hallautus, Genrge Riply, and Basil Valentine. As the alchemists were assiduens workmen, says Dr. Thomson, (Hiatory of Alchem $y_{3}$ ) - as they mixed all the metale, salts, dc., with which they were acquainted, in varions ways with esch other, and subjected such mixtares to the uction of heat io close vessels, their labors were occasionally repaid by the discovery of new sulstances,
possegsed of puch greater activity than any with which they were previonsly acqnatited. In this way Which they were previonsly acquanted. In this way
they were led to the discovery of sulphuric, nitric, and morintic acids. These, wheo known, were made to act upon the metals; solutions of the metals were olitained, and this gradaally led to the knowledge of various metulline aitite and preparations, which were introdaced with consideruble advantage ioto medicise. Thus the alchemista, by their nhsurd pursuits, gradually formed a collection of thets u bich led ultimately to the establishment of ecientific chemistry. Nodern chemistry phosvibility of chungiug ao iaferior metal into geld pussibility of changing ao inferior metal into golde
but electricity has not satd its last word; sind when man will have masteral that great puwn of osture many of the elemeads will be found, probably, to be unly componit bodies. The possibility of obtaining metals from other pubstances which contain the iagredieats componing it. and of changing one metal into another,
or rither of refining it, must, therefere, be left nndeor rither of refiting it, must, therefere, be left unde-
Alriblades, the son of Clinias, B . in the 82 d Olymphad, abt. $450 \mathrm{n} . \mathrm{c}$, was one of the most distinguibhed stiresmed of the pelopurnesina pides from the illustrious fimilies of his country, born to the inheritance of great wealth, eadowed with extraordiuary lieanty of person, and with mental qualifications mo less brilliant, it secmed evident from his early youth that he woull exert no slight ioflueace over the coumsels and the fortunes of Atheos. The faults of Alcibiades ware thase of A spoilt enild of fortune: he was fickle, aelfish, overliearing, and extravagunt. But these faults clonded, not concented,
his nobler qualities. Pashis nobler qualities. Pas-
aionately fond of show and oplendor, a frequent victor in the Olyoupic gatnes, rad possessed of a more ccimioal among the most dignified matrons of Athe'ra, he never lost sight of more manly objects of athhition; nud he met the proffered friendship of
Sucrates with eagenness, as the surest means of acquiring that mental cultivation
which of Athens was the text, though not the only key to pelition power The philusopher som acquired over his way ward puper. The inthaence which he seems to have exercised over all who came within his circle; and the close intinaty which urose betwecn these opposite characters was cemented by a singalar reciprocity of benefits, in a battle fonght near lotinea, Socrates maved the life of A., and the hatter repaid the oblization by a similar Sorvice at the buttle of Delinm. But the influence of Socratea was insufficient in this case to work a perminent charge of charncter; and the political life of $A$. structicina of his master. In the Pelobounesinn war, he was appeinted to conamand with Lysimachus, uniter Nicius, in un expedition ugainst syracuse: lint while he wis this emplayed, a charge of impiety was preforred Hgainst him at home. One morning all the Herme, or hatifathes of Merenry, which abounded in Athens were found defucen; and on a rewami bring offereg for the discosery of the offenders, some slaves gave infurmas-
tlon that it was done iny $A$. and his drumken conpunions tlon that it was done hy $A$, and his drunken companions,

ALDE
$\frac{\mathrm{ALCO}}{}$ It is a solvent of great value, little chemical action apos, and owiog to its volatility, it is ensily expelled by e gentle heast, leaviug the smlastances which it previonsly held in solution in a pure state. It dissolves muny of the gases freely; some of them, as for instance protoxide of nitrugen, carhonic achil, and cyathgra, are dissolved by it more readily thath by water. the deliquescent safts are shind in are sparingly soloble efflorescent salts, and whater, are not dissolved by it. W,th inthydrous in water, are not dissorve compounds termat uldaindsaliue buties, it firmise diosolves umay otganic botites ates. Alcultol the rosius, the essentiat oils, the veret.thle alkaloids, and many of tine vegetable acids. It also dis solves, noore sparingly, sugar, and the maps of puta-h soda. and ammonia; bit the fats ant bucr oik. Win the exception of castor-oil, are dissulved by the of smatl quantities. - Prparatom. Alction to diatialation tained io $n$ state of purity by shbjectiof eo fermenticany saccharine soldion bile than w.ter, it passers over tion; for. beimg wore volatile than acompranied with in the first part or the By repeated rechifisation, it may be coacentrited till it contains ahout 10 per crent. of be cuacentrated this point the water adheres watrongly that it requires a difforent process for the complete semaration of the last portions:-it is first rectif it from cbarroal, with a tiew of retainuly ail enseritial oils to which the pecnitiar puner or hatyor of dia ren spivits are mainly owing, and is then mix with atmat half its weight of quieklime, amin allowed to stamd for three or four days ; the lione grumbliy slakes nod a hy to powder, in consequence of its converspuabso the drate, at the explease of the wat of a hath of chloritle of on applyin: the heat by means of atilat off, the liysirate calcium, the pare spite water at t-mperatur s litr above $300^{\circ} \mathrm{E}$. Any traces of water whinh it maty still retoin are removal by a second ,listillation from yuicklime, or frim canstic lanyta. The alcoluh thus obtaioed is anhydruns, or, as it is often termel, ab ainte atendelAs $A$ mixes with water in all proportions, it is ofted importint to determine the amonut of $A$. Conthind 1 COHOLMETEE, $q$.
(Piysinh.) As a drink, $A$. is one of the most powerfu antagonists of life. When pure, it is adend pyonsint wben diluted, its pernicions effects are vot so rapid, of conrse, but it is ever injurious to leme MM. Gallemand, Duroy, sad Perrin, have positively proved that $A$. is nut. in any case, a food, as it is too gonerally believed; and tbat it is neither transfurmed nor destruyed withio the organism. A, Aomach in precisely the same conlition in which it entered it. it shows itself in tho breath of the hatintan drinker, in his perspiration, his evachition it is stil alcohol. Part ruay be retained in the Lloot, which it thins and weakens. For explaining the effects of atcoholic iaebriation, it is saide that A., takno io large duses is at first intensely stimulatiog, hut that a secumbty depresion quickly arises, which distur improper to give rectual powers: the name of stimulant to the eflate; it praralyzes. Thas faculties. A. does not stimulate; it pramy and chloroform, $A$. is a narcotic. The narrotics which especially affect the brain may exercise their depressidg infueace in such a way as to render that org.a, at once, more or less incapable of ministering to any toental operation: or they may lessen, at first, only its capucity as it occur when a large dose of $A$. is tiken isto the stomach. THe first warnigg of alcoholic inetriation is flnshing in the lice, an occurrence whated, the cervical sympathetic is graning to baralyzed. It is about this period that the driuker finds limself in unaatarally high spirits the drimker mal passions are more prominent; that feel that his of vanity carry lim away in garrulity of talk and that whatever sentimentalism there may be in his nsture, is apt to come ont. often ludicrously enongh. The clue to a right appreciation of the successive phe nomenat is this: that tbe feelings. ordinarily soppressed by volantary effort, are displayed, by tberemovin of the custonary veils, io the orter of their concartwent Reason and prudeace and ornernew upon the the varnish, mostly a thin one, sapernmposed upon the sensuous nature, wish and sume, and with the of estimatiog idens of timation of the muscular move power of This is the first stage of inebriation. Th effects of $A$. proceeding gradually to develop themeflves, the nerves of sansittion are completely paralyzal, and ths drunkard, then voiceless, falls to the rank of an animal of the lowest class. This is the second sta ace, claracterized by the stupility of the face. At mes paralysis extending itscls oo the nerves of motion, er this tive Lody in a state of completo insensibility. Alter this regularand progressive extinction of the vitnt propertis of the rampas portinns of eftiequatity of tire absorbed and last skig. and death is the immediate cousequence, exactly as it and death is the narcotics. - In the recovory from the poisoous influence of $A$, the brain ie the first to lose the influence of the poisoa. As a consequence of the reetoration of consciousoess which this brings about, the mind takes cogoizance of the condition of the still hulf devitalized sinsory perves, and there is thereforo
tusually the mensation of neursigic pain, often followett

sidered large, mitssive, pabewa stones, to be emblematic of dignity fud power. In the great temples of nucient Rome, there wore ordmarily toreenaitars. Tbe fist, npee
which incense was hurned, and libations offered, was rinsed in the san't mary, at the foot of the statie of the divinity: the secoml storod before the gate of the temple, and on it weresacrifired the victims: and the third, npon which were placed the offeringes and the sacred vessels was portatile. In the Romata housce, sumal atars war dedicatell to the lares, penates, aud genii.- In the Chris ti.an chorch, the $A$. is the talle of communion. The principal is almost iovarially situated at the eastera ent of the choir. Christian altars are geberally in the form of regeballe sarcophas, They are ofter very splendielly rescobnle sarcophagh, They are ofted very splendern lomsed work, and stodded with precions stones and metals. On great festivals, the relics of a chareh are displayed un the high altar, which is then illnmived with numeruos wax caudelabra.

Anac'reosi, one of the most famous lyric poets of Greece, was born at Teos, in lonia, and flourished atonut $500 \mathrm{~B} . \mathrm{c}$. Pulycrates, king of Eamos, invited him to his compusel his songs isspirell by wioe and love. After the death of his protectur, he went to Athens, where he met with the mout distiognished reception from Ilipparchus. The fall of the latter drove him from Athens, and probably he returned to Teos. But when Ionia revolted from Durius, be fled to Abdera, where lse passed a gay and happy old ege, and died in his 85th year. Accordiag to tridition, he was clieked by a grapestone. Thecity of Teus pot bi-likeness upon its coins: his statue was placed on the Acropolis in Athens, und he was held in hogur thrunghout Greece. Only asmall part of his works bis come down to us, of 51 houls, there are 68 poems remanning, noder the name of A. Among the日e, criticism1 believed to be $A$ 'se models of delicate grace, siniplicity, add ease. The difficnity of attaining these explicity, adi ease. Tho difficulty of attaining these excellences is proved by numberless muspccesstil imitameasure io which $A$. composed bis pneme, and which is called after him, is commuly divided into 3 iambinseg,

## Analeúma, $n$ [fir, analambuna I tuke up.] (Geom )

 Aa ortorriphic projection of the sphero ou the plame of the meridia. In this projection the eye is supposed to bo placed at an infinite distanco. Every great circle whose plane is perpendicular to the plane of projection,--the firms its diamuple,-is represented by the chord which of projection is represented by a circle. Every circle, great or small, of which the plane when produced docs not pass throngh the eye, or fo not perpendicular to the plane of projection, will be seen obliquely, and under the form of an ellipse-- A. also denotes an instrument of brass or wool, composed of a plate upon whichthe projection of the sphere is made, having a horizontal the projection of the sphere is made, having s horizontal
fitted to it. Siace the invention of trigonometry, coufitted to it. Siace the invention of trigono
trivances of this gort have become uscless.
Analep'sis, $n$. Gr. analambano to recover
Analep'sis, n. [Gr. analambano, to recover.] (Med.) A
recuvery of strength sfter eickness.- A species of recovery of strwigth sfter eickness.-A species of epi-
lepsy, which proceeds from a disorder of the stomach and with which the patient itapt to be of the stomach, and suddenly ;-named, also, analepsia. Analep'tic, n. [Gr. analephions.] (Med.) Restoratives which serve to repair the stroagth, sud to raise tho depressed spirits.

- a. Comforting ;
Analog'ical, a. That expresses or implies analogy.
Analog'ically, uuv. lit an analogical or analogo
Analog'icalness, $n$. The quality of being analogical; finess whenppied for the illnstratioa of some analogy Lnalogism, n. [r. andogismas, coure he effect (Lng.) An argement from the
mote of reasoning by sualogy.
Inal'ogist, n. One who adheres to analogy.
Anaioosons, $\alpha$. [Fr. analogue from Gr. ana, according to, aud logos, proportion.] Having analogy ; bearing parallel.
"This incorporal substance may bave some nort of existence,
analogous to corppreal extension.
Anal'ogonsly, adr. In an abalogons manner An'alogne, $n$. $A$ body that resenhles antother. A fossit Analogy, $n$. [Gr. analigia, from ana, equally, and ligns, ratio) (Rhet.) A certaia relation and agreement are entirely different. A riatio or relation between $t w^{\circ}$ objects denotes that they are composed together ia reference to some quality which they possess in common, or to some manner in which the oneis affected by the other In this way we speak of one thing greater, smaller, or
more beautifnl than nnother; or the relation of a child more beautiful than mother ; or the relation of a child
to its parents, of a pince to his people. It is, however to its parents, of a pince to his people. It is, howevery
only when we come to conpare relations, when we find that the relathou or ratio of two things ie tike the relatione of two other things, that we properly have an analogy. A naty rescmble B, but thero la no acalogy that C does to D , thee there is auslogy. In relation we have ouly two terms or olyjects of comparison; in analogy we mast have four, though it is not necesssary that all the four be different; for A may bear the eame relation to $\mathbf{B}$ that $\mathbf{B}$ dues to $\mathbf{C}$. Two things may be connected by analogy, though they bear in themselves no reemblance to each other; for, in analogy, all other
attributes are kept out of view but those in which they attributes are kept out of view but those in which they agree. Thus, the bark of a trce is analugons to the skin of manimaa, though there is do resenblance between them. In reasoning from analogy, we proceed upon the asamption that things which have many olseerved also in common. Analogy conclades from oonuethiog also in common. Analogy concindes fike inluction, it can give us a hifh degree of probability, hut it never reaches to necessity.
(Geom.) The samie thing as proportion, or the equallty or similitade of ratioe-See Panpostron.
(Zwit) The relation which animule bear to another in the similarity of a emaller proportion of their organization: thns, the Ascalaphus italicns, in the length and knobbed extremities of its antennee, tho coloring of its Fings, and ita goneral asjuect, exhinis a strikiag re of its organization it allherrs to the nepronterons type of structure : its relation to the Lepidoptera is therefire said to be one of analogy, while it is connected to the aut-llons by the onder of affinity
(Gram.) A conformity in the principles or organizatiou of different words, or collections of worda.
nal'omink, in Pennsylvanuit, a post-ofice of Monroe Anal'omink, in Fennsylvanjt, a poat-office of Monroe

Anal'ysis, n.; pl. Axti'ysrs. [Gr., the act of nnluos ing.] The process by which ficts, resulte, or reamoniog are mepurated into their single mud component parts, or
by meatas of which a simple truth is obtained, when given in a mere complicatiel form. So that, it its most general sense, the grenteat part of human knowledgo consives in the reeuite of anslysie. Ite opposito is sym thesis, which is then act of putting together. - It is also used for a brief, but muthulical iltumtration of the principless of a selience; in which schase it
mons with what is turmed a synorsis
(Math.) The mesase aude use of for discovering the trath or fularhood of a proposition or fis ponsilifity and impossthility. This is ulone liy supposing the propowition, such as it is, true; and examining what follows from thence, untfl wo arrive at neme evitient truth, or some impessilility, of which the fint propusition is a necessary cunsequence; and from therece establish the truth, or impossibility of thut proposition. "It is uscel is contrulistinction to the gromsetrical asethod, so that every mathematicul process in which syobbols nre entplayed, and which is not geonetrical, is analytical. ful cultivation may be merribed the immonso improve ment which may be melace in nuthmenso improve vast range of discovuries whifh have been made in philosophy during the lust two centuries.-In Anthme IIC and Descriptive Geometry, they give the nume of $A$ to the eynopmis or exposition of the principles to be cm played in demonstrating a proposition, or selving a problem."-W. G. Itrek
(Gram.) The explaining tho etymology, conetruction, and other properties of waris
(Bat.) The stady of a plant in its different parts; its diskection.
( Chem .

The separation of componnd todies, eithe into their simpler or their elementary constituents When merely the namher and nature of these are as certained, it is terased quatatice natysis; but when
their proportions also are determined, tho anslybis is quantitative. If the anulysis consist only in deteruin ing the quantities of the simpler constituents of a com pound, it is proximate, as when carbonate of potash is separnted into carbonic acill and potash; but when the operation is extesded, and the carbonic ecid is resolved into carbon and oxygea, and the potash into putassinm and oxygen, the analysis is ultimate; for neither carion, oxygen, nor potassium io divisible into two or mor Alomic Theory, as it is lury definte proportion, or Afomic Theory, as it is usually called, hus materiall facilitated many antalytical urocesses, and is ejpecially the general accuracy of the reallits
An'alyst, $n$. [Fr. analyste.] One who is versed in
Amaiyt'ic, Analytical a. Proceeding by analysis resolving anything into its first principles or elements as an analyticat experimunt in chemistry
Analyt'ieally, adv. In an analytical manner Amalyt'ies, n. sing. The scicnce of numysie. Aby Analyz'able, $a$. That may ye analyzed

becorse the geat of a considerabls commerce. Pip, 3,000. ancorse the seat of a considerabis commerco.
Anpest, n. [FromGr, ana, back, and puiv, to strike.] (Pros.) A foot in Greek and Latio metre, consistiDg of two start syllables followed by a long. It wits nome-
times called Antidactyius, as heiog the opposite of the times called Antidactylus, as heing the opposite of twe short. Assuming accent in Eaglieh to be the same thing with quantity is Greek nod Latio, the word temporal Woold be as example of a dactyle, and the word superciation to carry back the accedt toward the begin ning of polysyliables, there are not many single word which make unapeste in ouc laoguage. But the foot frequently reants from the onion of two or more words as in Dó yüa hēar, Lät älöne ; and sometimes it is fonnd in part of a single word; as, for instance, in the three middle syllables of the word anticipation. The predomi forman one of the mont marked distinctiong between the musical character of the one language und that of the musicas character of the one language und that of the
Anapertic Verre, a specjes of verse composed of a snccession of auapests. Among the Greeks. the soapeatic verse was freely nsed both in trugedy and comedy : eonor forms of it occur very often in Aristophanes. Both in tragedy and comedy, the sunpestic verse admits also dactyle and apondees. In Englieh, ooly porms of the lighter sort have been nsnally written in abapestic verse Austey' Now Bath Gude may be quoted as a well-known
example. The line is often redaced to eleven syllables, by the retrenchment of the first, or the suistitution at by the retrenchment of the first, or the suistitution at
the beginviog of on iambus instead of the anapest. Thus, in the followiog lines from the work just men tioned,

For I'm told the dtacourses of persons refined,
Are better thas broks for improving the mind,
But a great deal of judgmeats required in the skimroing
The polite couversation of tensitule women,"
It will be observed, that the firet foot of the second line conviste only of one slort or unaccented syllable fol lowed by a long; and a similar retreachment might be
made of the commencing syllable of any of the others malle of the commencing syl

Aneh'oress, n. A female anchored. anchorefes.] A person wi
(Eccl. Hist.) Under Christianity, anchoress sprung up about the middle of the third century in Egypt and Syria, where many believers came to hide themselves in caves and solitary wilds from the fury of the persecuLion which arose nader the Emperor Decins. Pant, commoney called the hermit, hiss the credit of having been the first regular sncloret. A distinction, however, came afterward to the drawn between anctorets and hermits:
the firmer name being given only to those who rigidly the firmer name being given only to those who right confined themselves to their caves or cenis, and
latter to those who, although they had broken of all latter to those who, atchongh they had aron at large in the wilds to which they had retired. Both descriptions of recluse were entirely distinguished from the Cento bites, or those living in communities. Many of the anchores were laymen; and there were also female as well us male auchorets. From nearly the commencement of the seventh century, the Church assumed a jurisdiction over aochorets; and persons were cost allowed to enter upon the mule of life in question, eveept by permission of their ecclesiastical superiors, and after hon appointed ceremony has hen purtiriued. at which che midop pro would sometimes keep an anchored shat up io a cell, which was numbly attached to the choir of the church.
 regnations with a view of discouraging the adoption of this solitary life. The mast sinpmar spores is that which arose in Syria in tho filth century, and of which When stylites was the fumbler. This, zunulut and his follow, ra, instead of resorting, weoriling to the customany fashion, to caves, "deviated thenywlyes into the nit on lofty pillars of stour, on the tops of which they payed their lives. They have hence recrivest

Anchylo'sis, $n$. [Gr. from agchylmai, to bend.] (Med.) $\Delta$ stiff joint. It is divided into the true and spa rout, according as the orotion is entirely or tot partly
lost. This state may arise from various canoes, as tune faction of the cads of the booed, caries, fracture, dislocation, dc., also drop dy of the joint, fleshy excrescences aneurisme, end other tumors. It may also be owing to the morbid contraction of the flexor muscles, indore by the limb being long kept in a particular position, a a relief to pain, after burns, mechanical injuries, \&c The rickets, white swellings, gout, rheumatism, palsy from lead particularly, and sone other disorders, often
lay the foundation of anchylosis; ;un the joints are lay the foundation of anchylosis; aud the Joints ar joint is perfectly immovable, little can be done for the patient; but in the spurione forms of the complaint, the first thing is to remove, if possible, any cause mechani ally obstruction the motion of the joint, and then to cully obstructing the motion of the joint, and then inflammation exist, this most be first subloloed by proper means, but no rapid improvement is to be expected in general.
n'eiyiotic, a. Belonging to anchylosis Oldest, a. [Fr. ancient, from Lat. anted, ante, before. Witness those ancient empires of the earth."- Hilton.
-Old; that has been of long duration.
"God was of all things the most ancient, because be never had say beginning." - Eakligh.

- Past ; former.

- Ancient and old are thus distinguished: Old relates to the duration of the thing itself, as, sa old coat, a coat much worn; and ancient to time in general, as, an an-
cent dress, a habit used in former times. But this is cent dress, a habit used in former times. But this is not always observed; for we mention old customs; but though old is sometimes opposed to modern, ancient (Hist.) In a limited.

Hist.) inn invited sense, ancient ia need io reference to a certain period in the existence of the haman race modern, history; of the ancient classics, ancient litera tare, and generally, of the ancients. The bonndary-line between ancient and modern in this latter cense is not very accurately drawn; but according to the vulgar ac ceptation of the terms, the period of the ancients seem to be closed by the final and complete overthrow of the western Roman empire. With reference to the nations
over which that empire extended, the distinction is nut over which that empire extended, the distinction is not altogether arbitrary. or without an intelligible reason The overthrow of the Roman empire marks the con menconer the aliment of the powerful independent discover of these various loges es, pair insttutions, which so ramarkubly distinguish a large fur tron of what is called modern Europe, from Europe under Roman doorioion. There is of course a shot interval, which may be considered as doubtful ground for the possession of which the terms ancient and mod-
ora will always be allowed to contend.

of the contioent of $\mathbf{S}$. Americs. The $A$. are the highest of the contioent of S. America. The A. are the highest taias the most elevated in the knowa world. The (brdilleras, a name sometimes given to this chain, is properly applicable only to the innermost and highest ridge of the mass. In considering these monntains ue a great featore
io the physical structure of the earth, we moy fix their io the physical structure of the earth, we moy fix their S extremity in the rock $y$ islands of Dicgo Ratoirex, of Cape
Horn, in Lat. $56^{\circ} 30^{\prime} \mathrm{S}$, and their N . terminstion in the Hora, in Lat. $56^{\circ} 30 \mathrm{~S}$, and thic N . terminstion in the 69 th of N. Lat, st the month of the Mackenzie river. I is difficult to say where the real chain of the $A$. com-m-nces. It continueg, however, when once formed,
without a break, to tho mouth of the river Atrato, or the isthmus of Darien, which pours its waters into the Caisthmus of Darien, which pours its waters into the Ca whole line, from Diego Kamirez, of $64^{\circ} 15$ ' of Lat. The A. of S. America, although is our maps they look like one longsiagle ridge, are by no means so, bat are compused of a series of chains of mountains, more or less parallel, enclusing vast elevated plains or table-lands, and of eeveral great groups, like knots or articulations, at distant
intervals. The averagu width of ther base is extremely intervals. The averago width of their hase is extremely narrow, considering their great length, io comparison With that of most other extensive aysteous of monntains breadth varies only from 60 to 70 m . The occur, the tension, from east to west, is between the parallels of $15^{\circ}$ and $18^{\circ} \mathrm{S}$., in one of the groups, where a bave line perpendicular to the axis of the chaio would he neariy 400 m . in length. Toward the Straits of Le Maire, the range cousists of rocky hills, rising to an altitude of 2,000 or 3,000 feet. Cape Ilorn itzelf is a conspicuous rock upward of $3,000 \mathrm{ft}$. high. Mount Sarmiento if

measure.] (2'hlys.) measire.] (Phys.) An instroment used fur measuring
the force amil velocity of the wind. Various instramenthave been iavented tor this pmrpese. the first of which have been iovented tor this parpose, the first of which
is attribnted to Welfins, who drscribel it in 1709 Considerable improvements have been since nade npon the construction of anemume-
ters; pevertbeless, that invent is still considered to be one of tho most coaveniont and accurate. It consists of two upright glass tnbes, A B aad CD, shoout 9 inches high, and in of an
inch wide, connected below $2 y$ inch wide, connected below by
a poech aarrower tule, $E$, va-
 inch io width. The tube AB is bent at right angles, en ns to
receive the wind blowing into it horizontally. A scale, gradutted io inches and parts of an iuch, is placed between the tulees, and the whole instrament is made to turn round the steel spindle, $\boldsymbol{G}$. which can be screwed into a block of
woed hy ascrew at the bottom. When the instrament is used, water is poured into the tubes at the midule of the scand When mo disturbing furce acts

npon either collumb of liquid, the level of hoth is accnrately the same; but when the mouth of the tube A B is turged towird the wiod, the colunoo in A B is presseet downward, and that io CD rises propertionably, and
the difference of the heights of the two columns gives the column of water which the force of the wind snstaios. Now, as we know that the pressure of the
atmonsphere at the earth's surface supports a column of atmusphere at the earth's surface supports a column of
water alout 33 feet hiyh, or presses with a force of filiont water about 33 feet high, or presses with a force of athont
$2, \mathrm{n} 6 \mathrm{l}$ lbs. on the square foot, this iustrument cives us 2nimediately the ditia from which we can calcnlate this pressure or force of the wind. Thus, supposing the pressure or force of the wind. Thins, supposing the
wind to blow with a force sufficie to to ruise the nue colume one incll alove the other, we have $\frac{1}{2}$ of $\frac{1}{2}$ of
 the force of the wind.
Anemom'etry, $n$. The measurement of the force and velocity of the wind. - See Avmometer.
inemone (Sea). See AtTiNis.

Anfraet'nose, $a$. (Bot.) Winding or turning about; Anfraetitus'ity, Anfraet
Lat, on for ambi, and frengere, fractus, to break.] The quality of being broken off short, or about, so as to produce the effect of neelless coignes or angles. It is used metaphorically of etyle
angnlarity; tortuousness.
Anfract'ions, $a$ [Lat. onfractus.] Winding: full of tursings and wintiog passares; 4s," There are several anfrachuous cavities in the ear-bone.
An'sel, n. [Gr. ogyelos; Lat. angelus: Fr. onge, a messenger of God. J (Eccl. Hist.) The name given to those apiritnal, intelligent beings who are supposed to execote the will of God in the government of the world. Their office is to serve the Deity, whose agents they are, in effecting his good purposes, as the tutelary spirite of whole natioes,
as the heralds or his commands, and as the guardians of partionlar individuals. They were aupposed to be spirpartioular individuals. They were supposed the spirestablished as a doctrioe of tha church by the council of Nice, in 787, but is at variance with the decision of the Lateran conncil of 1215 , which makes them immaterial beings. Those who regard the body merely as an incumbrance, or prison of the soul, and conceive a very exalted idea or pure spirits, held angels to be such spirits, and explain their visible appearance by suppesing that they have the power or assuming at will bodily forms and a hmman shape. Those who consider it no imperfection for aspirit to exist in a moty, maintain that angels have place where they reside. The ancients easily found a banitation for them in their heaven, which was ceuceived to be a vast aznre hall, where God dwelt with his angcls; bnt we, who have viry different ideas or heaven and the universe, can only suppose that, if they atill operate on human thimes. they dwell invisibly with and about us.-Ae to their names, the Catholic Chnroh receives only three as sanctionsil ly the Scriptures, - Michad, Gabrit, und Kuphapl; hut ther number is alwaye represented as inumensily great, and also
that there is a suburdination anumg the H. Hence, feclesiustical writers makean hierarchy of nitas ardere of hierarchy of nitas ardere of
angels--But lesides these, ministers of God's wrath; as the destroy mg augel, the ansel of death, the angel of Satan, the angel of the bottomless pit, ant the fallen angels, or thuse whe kept not their first estate, but fell from their obedience the regions af light In general, pooll and had ingels are dietioguished by the opposite terims of angels of light, and angela of darkness
Fignratively, in the atyle of love, the name of angel is applied to a beautiful perfoction.
"Sir, os t thaven

the $A$. lunguage is found existing in all its original purity. The A. language and literature has, in mudern purity. The A. language and literature has, in modern of Thorpe, (inest, Madden, Conyheare, and other wellknown English philulogists; and perhaps the most perfect examples of $A$. comprsition may be found in the Ango'la, a large district of S. Africa, sitnate S. of Cungo, W. of Loanda-land, embracing a considerable portinn of the coast, aud extending lar inuard; Lat. be
tween $8^{\circ} 20^{\prime}$ and $9^{\circ} 20^{\prime} \mathrm{S}$. Lon. extending frem $1 t^{\circ}$ to tween $8^{\circ} 20^{\prime}$ and $9^{\circ} 20^{\prime} \mathrm{S}$, Lon. extending from $14^{\circ}$ to
$19^{\circ} \mathrm{E}$. The conntry is fiat and sterile along the coast $19^{\circ} \mathrm{E}$. The constry is fiat and sterile along the coast,
but monntinous in the interior, where the valleys are but monnt.tinous in the interior, where the valleys ar
extremely fertile. Almost all the known wild aninals of tropicial Africa are found there. The rivers arc infect of tropical Africa are found there. The rivers arcinfert-
ed with crocodiles, end the sei-coasts tecm with every description of fish. Althe ugh sitnate near the equator, the climate is, on account of the trade-winds, more temperate, ani ginerally more healthy than in other reginat of the same latitude; but some parts of A. are low, marshy, fever-breeding, and even the matives feel the effects of the damp, bot, nalarious climate. The inhabitants, althongh dark, are seldem, if erer, black,
their color hoing uruwni-h-red, with a tidge of yellow; their color being browni-h-red, with a tinge of yellow; and slthonglt they are so clase to the conntry inliabited
hy the true negroes. they have bnt few of the negro ly the true negroes. they have bot few of the negro
raits. The traveller Reade writes of the Angolese women in torms of considerable praise, as far as their personal ajprarance goes. The chief town is Loanda pan Panlo. Fetichism is the general religion. A. was discovered in 1456 ly the Portugnese, whontill hold it and traftic with the natives in ivory and other home prodacts. It was for its extensive tratfic in slaves, how-
ever, that A. hat leen principally notorious. ever, that A. hat been principally notorious. Iop, es

and was succeeded in the post of favorite ly Mrs. Mashand was succeeded in the post of favorite ly Mrs. Mash-
am, oue of her nttentants, a woman of obscure birth and mediocre chtracter. Iler reign is especially celebrated as a literary ara, from the number of great writers who then fluurished, the manificent putronage bustowed opoo them, and the high esteem io which the trion of Jetters was generally held. Among the illustrigus literati of this period are found the nomee of Pope, Swift, Bolinglroke, Newton, dc. D. $1: 12$.
Inne op Austnis, Queen of France, B. 1604, was the eldest daughter of Philip II. of Spain, atad married King Lonis XIIL, in 1615. Daring the lifetime of her husband she
was constanty at variance with his great ninister, Carw. 18 constantly at tariance with his great minister, Car-
dinal Richelieu. The Duke of Buckiogham was deeply attachod to Aune, and made open love to her. She repriminded hime so gently that it was thought ehe re-
turned his turned his affection. When Lonis XII. died, io 1643 .
Anne, as mother of the infint monarch, was appointed regent, and disulayed no ordiany political tact in making Cardinal Mazarin her minister. The Parisiang however, were uneasy; Mazarin was a foreigner, hie fiaancial policy was unpopular, and an insurrection arose which might have assumed fearful dimensions. It is knowo in rrench history as the war of the Fronde, q. v. The queen, the cardioal, and their partisins were opposed
to the notility of the kingdom nad the citizene of the to the notility of the kingdom mid the citizene of the
capital. The former finally prevailed. She died at the age of sixty-four in 1666 . Sle was beantiful in person, had much of German phlegmand Anetrian pride, yet she was amiable and forgiving
Anne pe Benesed, the eldeet danghter of Lonis XI. of France, b. $1+62$. Her father, jealous of her talents, mar-
ried her to pierre ried her to ererreding. On the death of Lenid Xi a prive acknowludged governess of the kingdom, during the minority of her brother, Charles VIII. The Duke of Orleabs laving insulted Anne, she ordered him to be arrested, whea ho speodily fled, and suught refuge in Brittany. A nueattacked the Bretons and routed them, took the Dnke, their leader, prisoncr; and hy the politic marringe of the young king of Fruoce to her namesake, the youthful duchens of Brittainy, that conatry was asnexed to the Freach crown. She retained her rank and auld when, dying child less in 1498, he was eluccreded by the Dink of Urleuns that priuce respected her claine the poko of Urceuns, that prince renpected her claime of France to avenge the fouds of the Duke of Orleans? D. 1522.

Aninc of влнemia, o. 1367, wne the pldest danghter of the Emperor Charles IV., and married Kichard 1I, king of kughand, in 1380. She may justly be regarded as one of the nursing-mothers of the Reformation, for sle protected Wickiffe towarde the close of his lite, when threatened
by the Council of Lambeth in $13 \Omega 2$. It was ehe who obby the Council of bambeth in 13s2. It wan ehe who ob-

Anneal', v. a. [A.S. analan, to kindle.] To sofen and temper ylasa, iroh, \&c, by heating and gradually cooling. Anneal'ing, $n$. (Chem.) A procese applied io the mannfacture of glass or some metala, to prevent the particles arranging themselves in that condition which produces a brittle quality. When glass and metals, more particmlarly iron or steel, hare been beated to a red heat, they are very brittle. Glass drops, for example, made are so brittle, that when tomed fince huprris dinps, or when a portion is broken off, they fy ito a a toze, fragments; plass requires therefore to be aunculedprocess consieting in plecing it into a furnace for niany houre, and gradually drawing it to a cooler part of the over. Malleable iron, when it is to be suljected to pres sure, requires andealing. Thus, boiler-plates, which are drawn out by rulters, are placed for some time in an annealing furnace. Tempering of eteel is an annkegons procese, and consiste in heating the metal at varions temperatures. The explanation of the process of anneafing depends upon the theory of heat which may be adoped. According to the immaterial theors, the paratures of preparation in a pleculiar cundition remperto the attraction of con a pecular cone tion, oppused restored by the modified application of heat in the annealiog aod tempering process.

Anminciata. See Avvunctation
Annnn'ciale, v. $a$. [Lat. anouncio.] To give notice ol; toproclait: to report; to annonvce. Anmuncia'tion, $n$. The act of announcing. The
declaration of the ancel Oabriel to the Virgin Mary of declaration of the ancel Oabriel tomb.
the incarnation of Christ in her wom
(Escl. Hist.) A Canhulic feast in hon ciatiun fustitated in the ith century, as it the annonciation, instint ated in the ith centmry, as it is generally Orier of the A.- An order of knights instituted in
1360, by Amadeus YI., Duke of Savoy, uuder the pame
of Order of the Neck-chain or Collar: rained in 1720 1, Fictor Amadens to be the first wrder of the kiagdsin of Savoy, thmer the name of Ordane suprerad dell abmun crata. The present knag of Italy, Ievor Einn is a grand-nasiter of the order. The deconation is a fold
meshal, worn sumperdad by a gold cham on which enrexented the Annuncintion, Eurronaded by luvchnotw. The knigbts wear almo of tho lett breast it ofur ent broidered in gold. They are not limitedi it mumber, hut mant he of hight rank, tual alresaly mensted to the ordet of St Murice aml St. Jazarın.

Annancintory, $u$. Making known publicly.
Ana'ville, in 1 knnsylvuatr, a prost-athice of Lelianes Ano'a Depressiconsts, $n$. (Zubl) A ruminating animal
 boffalo, and by others a kind of antelope. The horns aro wrinkled, but perfectly ereet and straight, and the lasad is boug and nurrow.
 sonie of wheth inhabit the interior of our honses, where
they ilo moch injury in their laren state ly ginwiug they ito mach injury in their larsal state ly gmawion furniture, broks, \&re, which they pierce uith lietle ronnd holeb. Others feed upon wafirs, presirved specimene popularly the ly, popuharly the Death-watch, or tick, is renuarkalile for the mperstitions feeling connected with it. This little and the popular superstition abluded to in, that whun and the popular superstition anhaded to in, that wheth it will die before the end of tho year. It is chis-fiy in the advanced atate of spring that this little creature com mences its sonnd, which is uo other than the call of signal by which the male and female are led to each other, and which nasy be considered as amalagone to th call of biriss, though wot owing to the vatce of the insect, but to its beating ons, or striking any hard subprevailing numbear of distinct strulies whish it bets is prevaling number of distinct stroked whish it betits is from seven to mine or eleveta; and this very circomwhich it luars anuog the vulgar. These sonade or beata are kiven in pretty quick succession, mad are re peated int uncertain intervals; and in old house s, where the insects are munerons, may be hourd ut alnuost any hoor of the day, especially if the westher be warn. The soood exactly resemblice that which namy be mate by tapping moderately lard with the finger-nail on a table. The insect is of a oolor so nearly ressmbliug that of decayed wood, viz., an obscure grayish-hrown, thut i may for a consiterinnle tione edude the search of the familiarized as to be wade to leat occasionalls by far Gamiliarized as to be mate to beat occassonally, by takitag board, when it will readily unswer the noise, and wil continue to beat as often as required.
An'odle, n. [Gr. ano, upwards, and odos, a way - the way that the sun rises.] (Chem.) That surfice of which the clectric current cuters, being the negative extrenuty of the decomposing body, by the agency of a galvanic lattery, and is where oxygen, chlorine, neidx, \&c. are evolved. The term is fonnded on the view that in any case of electric decomposition, the decontroking budy is censidered as phaced so that the current passibg throbgh it shall be in the same direction, and parallicl to that supposed to exist in the earth from east to west. then thes surfaces at which the electricity is phesing suto and thitt fuward the east is the anode, and that toward the that tuward the
Anoiloir'1s, n. [Gr. a, priv., and odontos, tooth.] (Zovil.) A fresh-water nolluscous anioul, inhabiting a thin, in equivalvo shell; hinge straight, with either no teeth ur unere rudiments. The valves are thin, large, nud pearly; nud frotn their shape and hightness they are used in Fratuce for skimming milk. The $A$. is found in every quarter of the world.
Amoulyne, $n$. [Or. $a$, priv, and odyne pain.] (Med.) A medicine which eases pain and procares sleep.
An'odynons, $a$. That has the power of assnaging
Asoint', v. a. [From Fr. vindrr; pp. oint.] To rul over with an atactnous matter. - To consecrate by unoAnoint'er, $n$. The person who anoints
Asoint'ment, Anointing, $n$. The act of nointing, or the state of beug anointed.
(Hist.) Anointing the body or head with oil was a common practice with the Juws, and with other Oriental nations. Abstineace from it was a sign of mourning Anointing the head with oil or cintment seeths also to have been a mark of respect ormetimes paid by a host t hia guests, and was an ancient Eyyptian custons at frasts The Jewish priests and kings were anointed whentimduct to show that their persons were sacred, and their office to show that their prrsons were sacred, and their oftic
from God. In the Old Testament, also, the prophrcie respecting the Redeemer, style him, on account of his royal descent and his digaity, Messias, that is, thi Anmintrd. The custom of anointing priests still exist in the Roman Catholic Church, and that of anojnting kings in some of the Cbristian noonsrchies. The Greck and Romans, particnlarly the former, anointed them selves after the bath, and thus gave a yellow color to the body. Athleta anointed theraselves, in order to render Amo'ka, in Indiana, a post-village of Cass co, on the Chicago mad Great Eastera Ruilroad, 5 m . E.E. of Lo gatuport.

and most of their boundings are inconceivably light and elastic. Their horns, whatever shape they assume, sre curyed and epiral; in come, the femates have no horas in others, they are common to both bexes. They all possess a moat deticate gense of smell, and their eyes are proverbially bright and beaming. Their hair is generally short and smooth. The ears are luag nnd potnted; tails shurt, and tufted at the extremity. For the most part.
$A$. are gregarious, but some specied keep in pairs. They A. are gregarious, but some species keep in pairs. They
often browse like the goat, and feed on the tender ohoots of treed. Their flesli is usually of excellent flivor.-The A. seenis to be a connecting liak between the goat and the duer. The hind legs, like those of the bare, being willer than the fore ones, but not only give adacions ing precipices, a practice in which the $\boldsymbol{A}$. grestly delights. The horns are perennial. They mustly inluabit the torrid regione, or each parts of the temperate zone as are nearly contiguons, frequenting the cliffs und ledges of rocks, or traversing vast untrodden wildernesses. Africa appears to he their great nursory, but many kinds are natives of Asia; very few are met with in Europe; and It is remarkable that, notwithstanding the warmath of sontle America of wall suit to fousd in any oart a the New World. It has been custonary to clasa them as follows:-1. Trne Antelupes; 2. Basb Antelopes; 3 . Capriform (or goat-ike) Antelopes; and 4. Bovine (or ox-like) Antelapes. But some late writere on zoölogy have rendered the sab-division infinitely more minute; the epecies in many instances closely boridering on each other, while there are others in which ecarcely any corresponding features can be distiactly traced Thus, as sn emineat naturalist has remarked, "the genis Antilope has become a kind of zoilogical relnge for the destithte, and forms in incongroons assemblage of nll the hons firms, and ruminants together. No diversified are sents nut a single character which will either apply to all its alpecies, or suffice to differentiate it from conterminous genera." The common Autelope, or Sisin, A cervicapra, the most elegant specimen of the iribe, is a native of many parta of Africa, and atso of India. It is remarkathle for the pectuliar beanty of its long npiral borns, which are distinctly marked by numerone proninent rings. The 'rong-horn Antelope, A. Americana, inliabits the plains W. of the sissonri river, from the lower Kin Grunde to the Saskntchewan, and westward to the Cascule and coast range of the Pacific slope. Ahout half way up the horne there is a branch or proug, whence its popylar aame. Its color above is yellowishand naked parts of the noee black.

the book war comnonly regarded as genuine in the firt ceuturies of Christianity, critics have not been wantiog who have aloubted the evidence of its heing the work of St. John. The A., on account of its metaphorical language, has been explained differently hy almost every writer who has ventured to interpret it; and for the same reneon, it is one of those parts of the Bible which has furnished all sorts of sects and fanatica with quotations to support their creeds or pretensions. - The $A$ containe $p$ chapters, which may he livided into two principal parts. The first, after the title of the book the then present state of the Christian Church, incInding the epistolary instructions and aduonitions to the angels or hishops of the I churchen of Ephesus, Snyrna Pergamos, Thyatira, Sindis, Philadelphia, and Larmiceat of Asia Minor. The second part comprises a prediction of "the thingy which shall be hereafter," referring either to the future state of the Church through succeediog agee, from the time whes the apostle beheld the apoca-
lyptic visions, to the grand consummation of all things, lyptic visions, to the grand consummation of all things,
or the state of the souls of men after the great resur or the state of the
rection of the dead.

A. school far above the great architects of other nations. A. school far above the great nrchitects infore wible to imgine anything more srelle and teoder in form and proportion than the Muori-h type of structure as found io Spaio. The system of decoration generally seen in these erections, produces
npon the senses an almost und finable impression: the multiplicity and minntie of detail so puominently pervading tho whole, together with the harmonious contrast of the richest colors exhibited thronghout. hoth excite and charm the itwagination. The sky-opening, of starlike form, that the Arabs of Spain employed in the construction of their domes, produces, from the mamer in
which it conveys light into the interior balls, a truly magical effect. Notwithstanding all this, the Muorish style does not present that aspect of clearness and grandenr which is so apparent in the Egyptian, the Greek, and the Roman monumental remains. Summarily, the view of construction, and also at the point of sight of the general system of decoration, has obtained its salient features from the architectural systeros of other nations, and more especially from the Byzantine,
Its only, and grand characteristics are, the method by

 Which the Aralis have combined wther stylus, the rat tions, and the extraondinary harmony which, in spite of all, is manifest in thair architectural conceptions. The more distinctive puints convected with the A. syo
tem are, liriefly, th follows, Their columns aro remark-
 jovt how areades. The shafte are slome and wlomide either plain or ornmented with linesa carsing, wenur tithes groovel perpendicularly, кowe times sporally. The capitals ure wither imitations of the tireek oriners, on cormed of clastered folliago

Ar'biter, n. [Fr, arbitre] A poreonappointed or chosen by partien engaged in controversy, to examine itoto and decide their differences; an umpire; an arbitrator. One who rulea or controls.
Ar'blirable, $a$. That depends upon the will.

Arloltrai, $a$. Which rulates to arbitration.
Arbilirameni, $n$. Determination; decision; will. (Law.) The award or decision of arbitratora poon
mattor of dinpute which has been submitted to them.
Ar'bilrarily, adv. By will only; deepotically; aboo-
lutely,
Ar'bifrinesm, $n$. Quality of boing arbitrary. Ar'bifrary, is. [Fr. arbitruire, from last. arbitarius.] Depending on will or discretion. It in used of a ten-
doncy to abune the proveswalon of power, and be harmh and unforhoaring. Tyrannical; deapotic; harsh; dictatorlal ; imperious: melash; Irrerponaible. Ar'bilrate, $\boldsymbol{v}, a$ and $n$. [Fr, arbitrer.] To act as an
arbitor or arbitrator. To bo in hearer, beholder, or observer of nomething; to hear aull decide; to decide or

Arbitra'tion, $n$. (Lavo.) The inveatigation snd detercontending parties, by one or more uuofficial person chosen by the suid parties, and called arbitrators or re ferees. Any matter may be determined by $A$. which the parties may adjust by agreement, or which may be the subject of a suit at law. Aby peraou who is capable of making a valid and binding contract with regard to the sulject way, in general, be a party to a referemce or
arbitration. Every one is so far, and only so far, bound by the awardas he wonld be by an agreement of the same kind made directly by him. In colninon law it is enparties to waive the right of trial in court by a jury. In Pennsylvania, however, there exists compulsory . Either party in a civil suit or nction may enter at the prothonotary's office a rule of reference, wherein he shall declare his determiuation to have arbitrators chosen on a certaio date, to be mentioned therein, not exceeding 30 days, for the trial of all matters of variance in the cuic between the parties. On the day appoiated, they meet at the prothonolary's office and endeavor to agree upon
arbitratore. If they cabnot so ugree, the prothonotary arbitrators. If they cannot so ugree, the prothonotiry makes out a list, on which are inscribed the names of a number of citizens, and the parues alternately strike, earch, one upon, or fixed by the prothonetary, are left, whe are to upon, or fise arlitrators. A time of nuecting is then fixed, at which the arbitrators, having been Eworn or fixed, at which the aristrators, bsving been sworn or ance submitted to them, proceed to hear and decide the case. Their award is filed in the office of the prothonotary, and has the effect of a judgment, subject, however, to appeal, which may be entered at any time
within 20 days from the filing of auch award.-Bouvier. Within 20 days from the filing of auch award.-Bouvier. Ar'bitral
governor.
governor.
(Law.)
(Law.) A disinterested person to whose judgment and decisiou matters in diapute are referred. An A. ought
to be incorrupt and impartial. His powers and duties to be incorrupt and impartial. His powers and duties bonnd by the rule of law, and canuot award nnything contrary thereto. His authority is at an end as soon Re the award is made.
Ar'bitralrix, Ar'bitress, $n$. A femsle arbiter. Arbit'renienf, $n$. Decision; determiontion. (Law.) The award of the arbitrators. - Soe Aamira
Ar'bitry, n. [Lat. arbitrium.] Free will.
Arboé, A pariah of 1reland, in the connties of Londonderry nad Tyrone.

pal. A prefix nsed in numerous compound words. We which ure self-explainiog
Arch Triamphal, astructure raised by the Romana to add an additional lustre to the commemoration of the military exploits of a victorions general. These strum tures originated in the custom of aduroing with the ppoils of war the gate by which a successful military leader entered Rome ou his returu from battle. After a time these temporary monuments were replaced by others of the more endurable mature of stone end bronze. The arcus triamphalis, as the Romans styled this form of structure, was usnally erected io some public thoroughfare. In design they were commonly eather ne large arch, or one large central arch will one or and sides of the erection were d-curated with trophited and sides of the erection were d-corated with trophies, tural allegory, bebeath which was on juscrintion enblazonigg the deeds of the hero in whose honor the arch was erected. The most romarkable of these edifices stil exieting are the arch of Augustus at Rimitar; that of Trajan at Beneventum; at Rome, those of Constantine, Severus, Drusus. Gallienus, end Titus. The oldest and most admirathy proportioned, however, is that of Titus, Whose conquest of Jndea it was built to celebrate, Constantine. (See Fig. 178.) Mauy similar monuments

Fig. 178 - tricmpeal, arch or constanting, (Rome) of departed Roman creatness exist in Framce, Egypt Spain, and Greece. France possesses of modern A. the kreatest number. Those of the Porte St. Deais and Porte .. Mirtorier of the victories forming the western entrance of the Tuileries rousel, forming the western entrance of the Tuileries 1s06, and fioisled in 1809 ; in beight it is 47 ft ., in brewlth 55. Surmonoting it is a great equestrian gronp. composed of a chariot drawn hy thorses, and guided by the :Alegurical figures of Peace and Victory. But the grandest and most colossal triumphal $A$. of modern
constraction is that standing at the ead of the Avenue
dus Champs Elyeées, at Paris. It was orected to com monnorate the netorles of Napromil I, and his armies andil after the remoliun of $1 \times 30$. It has 3 anchus, the central one belne 95 ft . high. In the Interior are graven the mames of the ruat emament of the fronch gearrals with that of their lesuler. Lombon preseseses but two atructures of this kind - the erch at Hyde Jark, yupportugy the equestrian atatne of the Duke of Welling tun, aud the Marlile Arch.

Ircheress, $n$. She who shoots with a bow and arrow arch'ery, $n$. [From Lat. oreus.]. The art of shooting
witha a bow and arruw. This art, either as a meaos of offenco in war, or of snhaistence and amusemeut in time of pease, may he triced in the hintory of almost every nation. 1t always however, declines with the progress of time, which introduces weapons more to be depended ou, and not so casily exhansted as a bundle of arrows. With the accients, the saguariz, or archers, wero an iomportant clase of troups 10 the middle egee, the bow was much more used by the burghers than by the barons, The Swiss were famus archers. Io modern times, this weapon is used by the Asiatic nations, by the tribes
of Africa, by the American Iodians, \&c. In 1813 and 1814, irregnlar troops, belonging to the Rnssian army particularly the Bashkeers, appeared io paris, armed ${ }^{\text {particularly the Bashkeers, appeared io paris, armed }}$ with bows and errowe, and made enrprieing shots. This weapon was the leadiog arm of the English people for centuries, aod their expertness in the nse of it was proverbial, Great dependence was placed upon archers in

war; and frequently has the euccess of a battle been attributed to their meamis, as at Creesy, Poitiers, and Agincoart. Most of the English Bovereigns had a bodyKuard entirely consisting of archere. In the reign of became merged in the Artillery Compauy of London. bas been revived in modern tinee us a pastime, and is largely practised thronghout Great Britain, Gormany and Switzerland and also io some cities of the United States. The Toxopholite Society of London was first eatablished in 1781.-The principal instruments employed in $A$. are the how, etring, arrow, glovo, and brace. The bows are generally mate of yew
and ash, and the best arrows coma from the litter deand ash, and the best arrows coma from the hitter de-
scription of wood. Tho diatance to which an arrow can scription of wood. Tho diatance to which an arrow can
bo gent by e good archer is generally from 200 to 250 yards. Interesting particnlare of thie art mny be found in Blaine's Encyclopelia of Rural Sports.

Archimede'an, $a$. Relating to Archimedes,
Archim'edes, the most famous of ancient mathems: ticisas, was a native of Symucuse. He possessed equal koowledge of the sciedces of astronomy, geometry, bydroetatics, mechamics, and optics. Among his iovenweights the combination of palleys for hifting heary tion of the motion of the heavenly bodius lis invention of the motion of the heavenly bodiks bas especially exemplified in the defence of Syracuse when besieged by Marcellus. It is said that on this uccusion he devised a buraing.glass, formed of re flscting mirrors of sach power, that by it he set fire to the enemy's fleet. This well-known otory is, however believed to be equally an inveotion. Upun the city be ing taken by storm, A., then iu his 7th year, wne nmong those who lost their lives, b. c. 212 . Iifis burialplace was afterward discovered by Cicero. Nino of the
Archimédes, Pancipls op. (Hydrand
ArChimedes, Paiscipls of. (Hydraul.) A wellKuow a principle in hydroatatics, the discovery of which bears. This important theorem may be thus defined: When a solid is immersed in a fluid, it loses a portion of its weight, and this portion is equal to the weight of the floid which it displaces, that is, to the weight of jte own bulk of the fluid. An experimental proof of this principle is thas obtained : - From one of the arms of a balance is suspended a hollow cylinder, having a cylindrical mass of any anbstance capable of exactly fitting into it, hanging fromit by means of a thread. From the other arm placed until the solid cylinder and the hollow one are exactly conoterbalanced. Water is then ponred into a vessel around the solid cylioder, until it is completely immersed; upoo which the weights in the scale-pao will preponderate, the solid cylinder secming to have lost a considerable portion of its weight. The balance wilt, however, be brought into equilibrio, if water be poured iato the opper hollow cylioder until it is quite fall. Now, as this hollow cylinder is of such a size that the solid mass exactly fits its iuterior, it follewe that the water with which the hollow cylinder is filled is prethat the apparont loss of weight eyffered ; which proves precisely equal in weight to mass of water equal is precisely equal in weight to a mass of water equal in mode - but not the most exact - by which the epecific gravity of solids is ascertained. A wonderfol story is told in connection with the discovery of this important prisciple. Hiero, king of Syracuse, intending to offer to the gods a crown, caused one to be manufactured of pare
gold. Whed browght bome, the crown appeared to be of full weight, but it was suspected that a ppart of the gold had been stolod, aud a like weight of silver entustituted, Archimedes was desired to iuvestigato the supposed fraud, and while engaged in bolving the difficalty, he tain quantity of water overflowed, equal to the bulk of his body, he instantly kuw is it the solution of the pritlena. Carried away by his ardor, he is said to have hastened home, without waiting to dreas, crying out," Lureka!" (I have found it!)-See SPEC Fic Gkiviry, Arehime'des' Serew, or Spiral I'rirp, n. (Hydrawl.) A machine invented by Archimedes, the celebrated Syracnean philnoophor, whilo studying in Egypt. Observing the difficuity of raising water frum tho Nile to places signed this screw as a means of overcoming the obstacle. it consiste of a pipe twisted in a apiral form roond a cyl end of the pipe is anmersed in water, and when the cylinder is made to revolve on its own asis, the water is raised from bend to bend in the epiral pipe until it flows out at the top. Architee'tive, $a$. Used in architectnre. (R.) the art of building. (a.) the art of building; that is, accordling to the rules of
Arehitecture, n. [See Architeot.] The art or science of bnilding according to certain proportions and rales determined by the character and future approprintion of the edifice to be erecter. It bears which it is applied. When called Civit A., it has for its object the constraction of any public or particnlar buildings intended to meet the requirements of social man. This class of $A$. may be snhdivided into domestic, rural, und thonumental, agreeably to any particular object it has in view.-Mititary $A$. relates tu the erection of works neceasary to the defence or athick of a towa or territory. See Fourt-fication- Naval A. has for its object the constraction of marine vessels, whether intended for purposes of war or commerce. See Ship-BUILDINe.-Hydraudic Architecture signifies the art of conducting and retaining botics of water; as also that of the formation of stric-
 $A_{\text {., }}$ and more especially of momumental and religious $A_{\text {. }}$., it all epoche, and of ull nations; becuase it is in the erection of religions edifices that the architect has displayed all the resonrces of his art; nud that with every religious system there has invariably leeen a corresponding architectural system, forming both its symbol aud its material realization. A. constitutes a veritable art, bnt this is only when a people or nation shall have arrived
at a certain point of civilization, wealth, and Inxury. In at a certain point of civitization, wealth, und inxury. Instrial parsuit, which had for its object the providing of a shelter for mankind against the inclemency of the seasons. And, whatever may be the perfection to which the state of $A$. has attained in any conntry, there is always found certain charucteristic features belonging to fonnd that writers generally agree in recognizing three different types of $A$., of which every one relates to the three different estates of the human race. The oldest people were shepherds, agriculturists, and hunters. The tended their flocks in the more fertile plaine. They tended their flocks in the more fertile plaine. They
were consequently obliged to provide themselves with such movable dwellings as it would be practicable to cordingly them during their peregrin forms the exident type of all Chinese $A_{\text {i }}$ : the inhabitants of that country in common with all the Tartar tribes, being originaliy nomade, or. in other words, ehepherds, and cenobites, that is to say, dwellers in tente. Un the other hand, the agriculturist, finding himself ander the necessity of fixing his permanent habitation in the conntry of his choice, Was obliged to build a bomestead sufficiently etrong and commudions to shelter not only himself and family, but also his herds and harvests. The hut or contage with for those prople who lived by the chase, or by fishing, for those ptople who lived by the chase, or by nishing,
their mode of life, in incessantly roaming over mountains and forest countries, surgests the belief that they were contented to tike shelter in such natural excavations as the rocks might present to them, or to dig cavities callud larrows, in which they domiciled. This manner of habitation may be jndged from the ruins of Petra,
(F.g. 181,) on the 8. of the Dead sea, in Arabia Perrea (F.g. 181,) on the 8. of the Dead sea, in Arabia Petroea.
Alt.gether, we ought not to believe that theart Df A. in any country lian reference to any unique principle or type; becanse, if the Chinese system of $A$. be derived from a tent, that of Greece from the primitive hat, and that adinit that Egyption $A$ proceeds froul a combination of admese two last principles. It is impossible, in the actual
tate of science, to fix exsetly for such remote periods the chronulogy of A ; beither dues the keneral plan of this
Work permit of a condensed general article on its history

We will, therefore, give only such a sketch of the prin cipal orders as will enshle the render to refer to the portant to know of the $A$. of nny conntry that is imwe are indebtod for the three principal orders of $A$., the Doric, the Ionic, and the Ominthian; Rome sddel two others, both formed out of the former, the Tuscan and the Composite. Wach of these has a particular expres eion; so that a building, or nny parts of one, may berude solid, neat, delicate, of gay, accordingly as the Tuscan
the Doric, the Ionic, the Corinthian, or the Composit the Doric, the Ionic, the Corinthian, or the Composite are enaployed. The colnmas of these several oritere ar of the ornaments that are pecniar to their capitals. hnt of the ornaments that are pecniar to their capitals; hut The Tuscan order is characterized by its simplicity and strength. It is devoid of ell orumpent. The Deric i enlivened with ornaments in the fricze and capital. Th Iovic is ornamented with the volute scroll, or spirn horn; its ornaments are in a style of composition be-
twixt the planness of the Doric and the richness of the twixt the planness of the Doric and the richness of the
Corinthian. The Corinthian is known by its capital Corinthian. The Cbrinthian is known by its capital
being adorned with two sorte of lenves; between these beitig adorned with two sorte of lenves; bet ween thes
rise little stalks, of which the volntes that eupport the highest part of the capital aro formed. The Cumpnsit is bearly the same as the Corinthiau, with an addition of the Ionic volnte. In their private buildiags the Roman architects followed the Grecks; but in their public edilices they far surpassed them in grandeur. During the dark agee which followed the fall of the Roman en pire, the classic architecture of Grecee and Rome wa lost sight of, but was again revived by the Italians at the time of the resturation of letters. The Gothic style was so called becanse it was first used by the Visiguths
but at first it wias vastly inferior to that which we now cal but at first it wis vastly inferior to that which we now cal the most accurate execntion. Tho Saxm und Norman styles were so called hecauce they were respectivily used by the Saxons before the conquest of England, ant by the Normans after, in the bailding of charches. The Saxon style was distinguished hy the semicircular arch, which thicy aeem to have taken partly from the Romuns and partly from their ancestors on the continent of Europe. The Norman was particularized by the fol lowing features: the walle were very thick, penerally withont buttresses ; the arches, both within and withon semicircular, and supported by very plain and sulid colamns. (See Fig.17.) Theserwo styles continned to be the prevaining motes of bnilding in England until the reign called Hodrn Gothic Whether this was parly wa ation from the other two modes, or whether it was derived from any foreign sonrce, is not known. It is however, snpposed to he of Saracenic extraction, find to have been introduced by the crusadera. This style is dis tinguished by its namerons buttresses, lufty spires and pinnaclee, and large and ramified window's, with profusion of ornaments thronghout. In the 15th an 16th centuries the taste for Greek and Roman $A$. re vived, and bronght the five prders again into use, al
thongh for sacred edifices the Saxon and Gothio styles still maintain the pre-eminence. It was in Italy that thronghout the whe 0 or Gothic all of the buildings linitt in the Ogivale style show traces more or less nmmerons, of the persistency of the Koman art. The coutemplation of thoxe classical monuments ao plentifnl in the Itafian states, lroughthack, year by year the Italian architect to them as to a school for imitation The first signs of this revolntion in art were manifested about the tath contory. Bit, it is to the celebrated Brunelleschi, born in 13i7, that posterity has rightly ac-
corded the titlo of restorer of the antique A. After him, corded the titlo of restorer of the antique. A. After him of which we huse spoken, wis L. B. Albertic of the nobl Florentine family of the Alberti. Amongst the crowd of great architects prodnced by Italy in the 16 the century,

Fo must mention the ilnetrions names of Bramante, Michacl-Angelo thuenarotti, Batitetho, Sun-iallo, Bal thasar Peruzzi, Giacunds, Sur-Micheli, Vignola, Serlio and Amminati. The style of that opoch has received furthar purane this kk te hof the history of $A$, us the further pursue this kksteth of the hietory of $A$., we the taries in Enrope nod in Americt ure well known to every one; and it belongs more peculbirly to a mperin reatise, in which to criticize the tendencies exhithted by the A. of this pericul. Bexides, the manera A. pre sents no ithobyacratic character which would purnit us to sive to it a particular nume; as, for a long time puat,

After the death of Cardinal Fleury, the war which was at that time raging threatened the very ex istence of the Freach power, tration of $A$, and his siogularity for selecting trampetent enerala, epeedily reversed the tide of events, competent generala, efion of victories to the French arms antil peace was restored in 1748 , by the treaty of Aix-la Cbapelle. A. becomiog obnoxious to M.tdame de Pom padour, the mistress of Lovis XV., lost the royal favor and was exiled; but after her deusise he ruturned to Paris, whers he D. 1764 . A. was a patron of letters, and the friend of Voltaire; great Encyclopedie of Diderot and DAlembert Ar'gent, $n$. [Fr., from Lat, argentum, silver.] (Her.) A term borrowed in armorial beariags. It is generally silver whed wed fields and charses of all coats-of-arms, whether celored or engraved.
Argen'ia, a tiwn of Central Italy, 18 m. S.E. of Ferrara; pop. in 1861, 15,296.
Ar'zental, $\alpha$ Fertaiding taniver. an arrond., and seated on a river of the sans name, 22 m . W. by N. of Alencon. It is well built, has agreeabl promenades, and pussessea manufactures of linen, lace (point d'Alengua), sc. Pop. 6,221.
Ar'seniane, German Shiver, Pace-fone, or Britisi Platz, a. (Cheme) An alloy consisting of copper, ment in farions proportions, in imitation of the and zine, in various pruportions, in imitation of the Chinese silver of pack-fong. The maillechort of Paris,
with a sp, \&r. of $7 \cdot 18$, consists of $\mathrm{Cu} 65, \mathrm{Ni} 16.8, \mathrm{Zn} 13, \mathrm{Fe}$ 3.4 . Each maker has his own receipt for imitating, or improving this preparation, extensively employed as hasis for platiog with silver; forks and spoons, sod articles of domestic use, being made or this material, a electro-plated. Before being dipped in the plating
trough, they are nsually immersed in nitric acid.
Argenia'rium, $n$. [Lat.] (Chem.) An aboy
ing of equal parts of lead and tin.
ing of equal parts of lead and tin.
Argenta'ion, n. (Fr. $A$ And, a village of France, dep. of Seine-et-Oise, Argen'tenil, a village of France, dep. of seine-et-dies,
on the Seine, 13 m . N.W. of Paris, on tha Cherbourg railway. Here was a convent of which the celebrated Heloise (see Abeland) was prioress. Pop. 5,816.
Argen'tie, $\alpha$. Relating to silver, or obtained from it.

Argentif'erous, $a$. [From Fr. argent, and Iat, $a$ r gentum, silver.] Containing silver; as, argentiferous

Argenti'na, $n$. (Zoobl.) The argentine, a gen, of malacopterygions fishes, belonging to the Salmonidee. The A. sphyrnena, caught in the Mediterranean, has an air-hladder, thick, and loaled with
nsed in making artificial pearls.
Ar'gentine, д. (Min.) The nlate-spar, is variety of cal careons spar, with a pearly lustre, funed in thin plates
in Norway, dc. - The name is aleo applied to oxide of antimony.
Ar'gentine, o. [Fr. argentin, from Lat. orgentinus, fromargentum, silver.] Like silver; silvery; sonading

Ar'gentime Repiblie, anmetimes called Aroentive Confederatiox, and formerly the Confederation or Rzpoblie of La Plata, in Sunth America: a repullic of
confederated Stateg whose extent in latitude is greater than that of any other existing conntry, thengh it only inghtly ex ceede that of the comparatively narrow ship of land which forms the Deighturing repunhe ef Chit of Magellan ; on the E. by the Atlantic Ocean, the Oriental Republic of Uruguay, the Empire of Brazil, and the Republic of Paraguny; and on the N. by the Republic of Bolivia. The boendary to the W. is formed by the monn tain chain of the Andes. The southern limit has been Jong a question of diapute with Chili, who claime the entire extent of the Strait of Magellan. Recently a commission was appointed tosettle this vexed question. The A. $R$. is divided into 14 prov, whose names, area, and pop. are given on page 20.-The most remarkabla feattend over more than three-fourtha of it. The plaine of Patagonia in the south, the Pampas across the extend ing central part of the country, and the Chaco in the northeast, have po definite patural boundaries. The two latter are, in fact, the eama continuous formation, in which a alight undulation divides the etreams of the Chaco, which join the Parana, from thnse of the l'ampas, which either flow into the Atlantic sonth of the mouth of the latter river, or disappear by alisorption into the soil, and evaporation as they spread over the plains. The best parts of thess plaiue are covered with formed by the constant decasing of the luxnriant veg totion byich growe upot it and this sil recte upeg edimentary deposit of earth, which appeare to been scoured away from the Andes and the high lavde of the central part of the continent. A great part of Patagonia and the Western Pampas consiets of grave and coarse detritus from the Audes, and though appar ently sterile, only requires irrigation to become productive. Other parts of the plains are dry, saline Wastes or blackish marahes, which probably mark the former prosition of an inland sea. The trne Pampas are atuated between tha Rio Negro and the Rio salado their principal vegetation consiets of grasses, which her trees are not met with. Towards the N the rege ation hecomes extremely varied; along the river it becomes Inxurimnt; the tre extraordinarily high. - Rivers. The great estuary of the Rio de la Plata (or River of the Plate) forme the waternhed of a great fluvial system, second only in S. America, to that of the Amazon. The prin cipal rivers are the upper Parnad, and ite twin, the
Haraginy. whuch, anter haem contuonce at Corrientes, form wat noblo stream, that, unsler the name of Paraná lows down to the gulf of La Plata. The Paraná proper Puruculy receive ary the pilcomaso, the traparaguay reccives as amuents the Pilcomayo, the Ara Salarmini, flows into the great river; and still further S awother S lado, ufter an E. course, enters the Athanti it the mouth of La Plate. The Coloralo, and the Kio Nugro, are etroums alan emboucling into the ocean; the hatter forming the Lonndary of Patayonia. There is also an iuland river. the Turuman, which, after a course of 50 mi S. E. across the Patnpas, loses itself in the sall
lakes of l'orongos, - Lakes. Owing to the uniformly lakes of l'orongos,-Lakes. Owing to the minformig
even surface of this country, the lakes are in general the mere overflow of the largo rivern. Of this descri min ibe celelirated one or Xarayoe, on the confines of Cembacu and, in fact, ull the lakes lying to the F of the Daragaay. That of Ybera, betweent thie river ami the Parsis in of great extent. In the S . parte of the republic, 14 chatin of aalt lak'e reaches from the $A$ nutes to the waters of the Plate. One of these, 360 m . S.W. of buenom Ayres, in noput 18 mm . in eircumfrruce, with it orm encraated with harin wait, that even iron tool . \$1. provincemare generally matuntaiusus, having with in their limuts mome of the fuftiont ontlying mpurs of the

On the icy summits of the Ande in almont intoleralif" chegree of ecold qurwaila in anmmer while in the phana the mamber hemata are nlomolutely pator frenzea allightly at certain times daring winter but shuuld thia happen frequently, the winter is deemed
severe, At the same place, the mean annual tempera
ture is about $64^{\circ}$ Fabr.; of summer, and winter mean is $72^{\circ}$, and 520 ; of summer, and winter, the however, the salybrity of this climate is unsurpassed by any other; and even that humidity of atmosphere incidental to the marshy and periodically ionndated dis tricts, is not prejudicial to the pnblic health generally Frun this salnbrious featore, 1 Prod danale near the frontier of Bolivia, acricultnre is little practised. Tucuman, more in the interiur, has a rich eoil, and warmer temperatore, aed produces grains and fruits. In Santiago del Estero, indigo was furmerly raised in quantities. The cnltivation of cotton ot curs bere ond threre in the provinces on the Paraná, but to no great extent; and it remaias to be proved in how far the growth of this important staple will be adapted to
the soil generally. Aronnd Bucnos Ayres, and in the Platine districts, the soil is fertile and prolific, requiring Platine districts, the soil is fertile and prolific, requiring
no manonre, and yielding abundant crops of wheat, barley, and maize, hesides aearly all the fruits of the temperate zooe, and the mo-e trupical varieties of oranses, lemons, and ananas. The vine is extensively cultivated, and furnishes the e soil of $A$. is, on the whole, admirably snited to the productien of cereals; but this busbandry, owing to Spanish anpineness, and the Indian aversion to labor, re mainet cumparative! y uodeveloped until the European emigration of late years, which has opened the resourc of the land, and promiees for it a prosperons future
(Bot.) As examples of the flora of A. may be med tioned, einchona, or quinise, earsaparilla, jalap, and othes medicioal plants, as the sassilras, maguey, guayacan, quality, are also iudigenons. In the forests grow cedar of a clase well idapted for ohip-building, the Ameriean pice, or cury, and the algarola or carob-tree, whose frnit affords not ooly food, Lut a pleasant drink called laogo Among the native finito are tie jujud, quabyra, guami (exuding a perfumed wax of which candles are made) the tatay, lurumay (resembling an olive), and the man (producing as oil superior to that of the olive)
(Zoull.) The zoology of the A. Mnch resembles that of Peru and Chili. The tapir is the principal grabinivoron animal ; and the hippopotami, the armadillo, guanaco vicuna, and fuma are are indigenoni. Eks and dee emits a fetid odor like that of the N. American akunk and is avoided by all living creatures, animal as well as human. Of lirds, tha nandu, or ostrich, and the condor tenant this country; serpeats of large size, and locnsts, abound. The onmbers of horned cattle io a wild etate on the great pland have been eatimated at $12.000,000$ and the horses at $3,000,000$, besides vast ambers of sheep.-Mrz. The anriferous wealth of the mountaing
of S . Bolivia, is said to be illimitable, and no donbt gave rise to the appellation of "River of Silver" (Rio de in rise to the appelfition of River of Silver (Mata) to that great stream whose head-waters fre found io its region. The A. republic has not as yet ehown much sign of mideral activity, but there can ve no doubt that gold, as well as silver, exists in the Andine provincee. Silver mines are being worked at Nas Juan and miaing is every year growing into importance in the districts of San Luis, Cordova, and Cstannares. Iron is found in Santiago del Estero.-Inhab. The aboriginal Chiquitos, Quaranis, Puelches, IIojos, Maboas, Huillichee

 nt from $1,000,0 \mathrm{~m}$ to $1,2 \mathrm{~h}, 000$. The princignal clase of the inbabitante of the A. Hre the Crisele searendanta of the spanimh aettiers, who, in mind. hanish and pmynique,

Thnngh vicions and indolent, they possess good nalural abilities, and occasionally exhibit a cort of spasimudic egergy. The meaner degree of Whitee are divided into latter capacity they to mure pons, but so deteri orated sa to be bardly above par with the savages. They are famous horsemen, and perfect masters of the lasso. the third grade instizua, Mulattoes, aud Negroes, fora the establisbed religion lint other creeds are tolersted The ecclesiastical power iv the 4 vies is aplendor with that of the ehurch in Europe. Large cathedrale, and monasteries, are foundall over the conatry. Education, however, is but little advascod,-Gor. The executive power centres in a prexident, elected for 6 years ly rep-
resentatives of all the prov. The legislative assembly is resentatives of all the prov. The legislative assembly is composed of a senate, and housc of depaties; the former comprieing 28 members, two from ench prov.; and the appoints to all civil, military, and judicial uffices; bot is responsible for the mits of hix nomineve, oud liathe to impeachment. The governore of provinces pussess ex tensive powers, and are, to a certaiti degree independent of the central execntive; these are elected hy the peuple for a term of 3 years. The army ummbered, in 1877, 8.283 mea, excluding 20,000 National Guard. The unvy had 26 small steamers.- Finonce. The reveeue for $18: 6$ was $\$ 13,563,603$; expeoditure, $\$ 26,333,877$. The total public debt $\$ 62,301,708$, more than half of which is held in Eugland.- Com. The staple prodnctions are hides, tities are exported to Europe and the U \& tities are expored to $\$ 19$ ils and the U . Their $\$ \$ 2,37 \pi, 385$. The imports embrace almost all kinde of dry-goode and mannfactures, and are principally ob-
tained from Great Britain. For year ending Jnde 30 , 1877, the U. S. imported $\$ 3,49,559$, chiefly hides and wool. The domestic exports from the $\mathbf{U}$. S, reached $\$ 1,129, \mathbf{J 6 8}$, chiefly petrolenm, refined sngar, lumber, and agricultnral implements. The Davigation of the Parana has much developed doring the last few years; a regnlar system of eteam commuascation being carried on between Buenos Ayres and the interior.- Rutroads, 1877 chnstrod mainly by the state, zumbered in Jun 18i7,991 milea; hines is constrnctioo, 331 miles, heside international lipe from Buenos Ayras to Chili, 894 gilus. The total of telegraph wires in 1877 was 9830 miles, The President of the Confederation has a salary of $\$ 20$, 000 , and the Vice-President $\$ 10$ ( 000
(Hist.) la 1516 , the estuary of La Plata wha discorered hy Juan Diaz de Solis, who, with his eompanione, were killed and devoured by the natives. In 1526, sebastian Cabot visited the Plate, and one of his captains, ancroding the Paraná, built a fort at the month of the Carcarans. The emperor Charles $V$, subseqnently ernt ont ad expedition uader the command of Mendoza, who fouaded the city of Buease Ayres, in 1035. The spamardo, after the lapse over the entire, onntry built cition, and tounded Jesnit missione In Iret, the Purtugreae jeulous of the necendeney of Spuin, founded the city of Monte Video in the Banda Oriental la 17iti, the Mate provimers were separated from the covernment of imm, ani formed into the viceroyalty of Buenos Ayres. In 1846, a Britich espedition was dispatched to the Rio de la Mata. and cap tured Buenos Ayres, which was ultimately retaken by the Spaniards. A second attack puet with no better re eult. In 1808 , the Epasiarids revolted, deposed the viceroy, and declared a provisiooal goverument. After a protracted struggle with the mother-country, they ac the $A$. prov. had no fewer than 36 clanges of govern-
meat. In the lant-aamed year. General hosus was elected president, with dictatorial puwers. He ruled the country with ao irod tyranny for $\mathbf{1 7}$ years, sought to bring the Banda Oriental, or Vruguay (as it ie noh termed), nnder bis control, and niso to exelade foreign commerce frum the river P'lata. Cpon this, France and England blowkated Buenos Ayres, occupied Monte Video, and captured tbe
Argentine flect. In 1849, a juce was concluded. In Argentine flect. In 1849, a juace was concluded. In J851, Brazil and Paraguay, objecting to the control of
Rosas over the navigation of the Paruna, declared war againet the $\boldsymbol{A} \cdot \boldsymbol{R}$. Thelr confedirated firces, mmounting

A'rians, n. pl. (Ecd. Hest.) A name usually all who adhere to the opioioos mivanced by Arius re appecting the relation of the Father and the son in th Holy Trinity. It is alleged by Athatuasius, in his 2 d oration ( $(24)$, that Eusebius of Nicomerlia, atod Asterius, agreed with Arius in maintaining that God, being will ing to create the universe, and seeing that it conld not
be subject to the workiog of his almighty Laod, made be subject to the Workiog of his almighty Laod, made
first a siogle beiog, whota he called Son, or Logos, to be first a siogle beiog, whotn he called Son, or Logos, to be a link between God and the world, by whom the whole Arins maintain that Clirist, the Sun of Coot, is the must exalted of all created things. but infcrior to God the Father, and produced by his free will. The opinion itself was first ventilited about 318 A. $\mathbf{D}_{+}$, and it was publicly condemped at the Council of Aleximdria, held in 320 A. D., ant in the Council of Nice, which was held
325 A. D. The orthodox Church maintained the perfect equality of essencs of both Father and son, and could only express their relation by termiog it eternal generation. The articles of both the Nicene, and the Athanaeian creeds, arose out of this great Arian controversy. Arius,
and his partisans, whre banished by the former conacil hut, as he hal powerful adherente, he soon found means stantine. IIe was on his way $\rightarrow$ receive the oath of minstantine. Ife was on his way. $\rightarrow$ receive the oath of min at Constantinople, wheo he died very anldenly as some say, by poison, in 336 A. o. His fullowers received great accessions after his death, and the emparor Constantioe is said to have been baptized into the Arian communion a short time hefore his deceabe, in 337 . Under Constantius, Arianism became the religion of the churt; and it even penatrated as far ias Roone, which wiss obliged to receive into its commanion Felix, eo Ari.n bishop. But the divisions which frew anong the A. themsctves, pre-
pared for thu Catholic Church au easy victory over them, pared for the Cathonlic Churchan easy victory over them, Arian faith occurred in the western putrt of the Romata empire, where all opponents of the Athanasian doctrine that the Son was hononossios, or of the same exsence with the Father, were callell A.; hat some of these opponents clung to the dostriue alrealy taught in the school of Origen, that the Son was homoiousi 1, , or of similar essuncu withs the Father. These recived the name of Simi-Arians: but the ecet broke up into sume peared from the listory of the Church. The $A$. however, taide a bold atrugite for existeace. They ascended the throne with Valens, in 364 A. D.; but Theolowius hurled them down, and restored the dominion of the
ancient Church. Their creed was altogether extinct in the Ronnail empire nt the beginnung of the Sth contury. It contimued to flourish among the Oothis, the Suitvi in Spain, the Burjundians, the Vaudals, and the Lombards, among which latter people it emrvived down to 6 biz A. Arith'metie, $n$. [Fr. arithmitipue; Gr. arilhwetike] concerned with the properties of numbers. Every oumber is a ratio or relation; that is to siny, every magoitude, compared with another magnuitude, is either equal, or greater, or less, and. therefore, has a certaio relation to
that with which it is corupared. A. is the art of comthat with which it is conupared. A. is the art of com-
bining these relations with ooe noother, using for the purpose the sigus themselves by which the nambers are distugnished; thas the four operations of addition, sub-
traction, multiplication, and division, include the entire traction, mutipheatiou, athl divison, ito
scieace. For the facilititing of calculations, and for commercial purposes, other useful rules have been inveuted; such as prop wrion, interest, discount, decimuls, cations of the foar elementary rules. The origio of $A$. is extremely obscure. According to Phato and Ditugenes Lisertius, A. and goonetry ars of Egyptiao origin; on
the other hand, Josophus affirms that Alraham, doring his stay in Egypt, taught the inhahitunts the use of namburs. The precise epoch in which numerical signs
and the first methuds of compatation and calcutation and the first methuds of compatation and calculatiou were discovered, is enveloped in equal mystery. Arabian
philosophers were of opioion that it was from the people philosuphers were of opioion that it was from the people
of loilia, during the 9ih or loth century, th.t they borrowed the signs which we call Arabic, but which they call ludian numerals. The employment of these annerals, sod the fiacilities afforded by algcorra, hive b been the chief causo of the immense progress and development
Arithmet'ical,

agriculture by the Jesuit fathers, have continned ever are about three-fourthos per anoum. The graziog laude of acres.-Irrigatzon. Ae the Nile in Eigypt, the Colormdo, $q$. v., 18 subject to anoual overflow. Thus, the valleys of
this river and its aflueate are thoroughly fertilized, and this river and ita afllueate are thoroughly fertilized, and, by a system of irrigatiog canals the water may tivily be
condacted to immerse tracts unvisited by its anuual condacted to immease tracts unvisited by its aluaual
overtlow. The celebrated Culorado desert, generally he overthow. The celebrated Culorado desert, generaily be-
low the bed of the river, and bordering it on both sideg for 150 m ., possesses a sonl cnimposed of elluvial earths, marl, and bhells, needing unly the stimulation of moisture to awakea its fertility. Other tracts along the couree of the river are susceptible of similar improvencat. The atturutiou of Congrese was called to this subject several years ago, when $\$ 150,000$ were grauted for that purpose, and a frst irrigating canal is now progressing. The anuoat of land that will be brought under cultivation dant sabsistence for 10,060 lndisns. The quaatity oi irrigable land is estiunated at oue million acres.- Mineral thoronghy to explore Central A. All aloog the Hassy ampa, upon the A $\quad$ ua Frio, a parallel stream of considerdible size, upon Liox creek, Big Bug, Turkey creek, an ${ }^{2}$, indeed, upoo vearly all the streams, loden of gold, sinver, and coppor, were found. The highly interesting report published by Mr. J. Koss Browne, in 1868, on the nrinerai resuarces of the states and territories west of the lucky ununtains, iodicates the discovery and locstion of lodes of tho precioas netals in all jarta of the territory, rather than their development. Ile attributes the wast of success of the miners hitherto, not to any
doficiency in the mines, but firstly to the conparitive doficiency in the mines, but firstly to the comparative
inaccesoibility of the territory, which is off the great inaccesoibility of the territory, whech is off the great
overland lives of travel, and without seaports; next, to the 1ndian troubles; and, fually, to the bmited extent of the placer digsinge, to the lack of water for their working, and to the refractory character of the ores of nunt of the lodes thus far opened. Iron, in carbonate bar, quicksilver, lime, plimum (metallic), gypeum, cinna in 1883 A.produced nearly $25,000,0001 \mathrm{bs}$, copper. The Salt monntains near Callville, and a few miles trom the Coleradu, are among the most reozarkable formations in $A$. The deposits of pure, traneparent, and heantifully crystallized sait are very exteusive, and ou sati is superior for table, or general use. - Cimate. Iu southero A, aod
upon the Culorado, the temperature io rether warm. In Central $A$, the suo is seldumupuressive. The thermometer has beea known to stand at $110^{\circ}$ on the Culorado, when it rose but to $65^{\circ} \mathrm{in}$, and about, Prescott, The niguts in the mountains thrulighout the terntory are coul at all beasons. Suow f.lle in Cuutral $\mathcal{A}$., bat, excepting in the higher monntains, it usually remamat frum Juue to Necember. - Divisuons. A. is divided into seven cob.: Maricopa, Mohave, Pima, Pinal, Yavapal,
Poh-Ute, and Yuma. Chuef unens are Tucson, Yuma (opposite Purt Yunia, Col.), Prescott (the cap. of the territory, aod of Yavapai co, a thriviag sity, picturesquely Tucson) Phomux, Floreuce, ind Minat, 190 mm . N.N.W. of Tucson), Froemx, Florence, and Mineral Park,-Pop. blood-thirety end treacherous A pache Indians, whose depredations and outrages are a source of cunstont trouble and terror to the whites. The white inhabitants are mostly employed in mioing; aevertheless, the agricultural settlemeots are mauy in the south end along the Colorado, in which distracts the Apaches are not quite so tronblesomie. The Iama, Solase, Chimahueva, and, gemerally, all the ludaun along
the Colorado, are friendly trabee. The Pinse uud Maricopa Indiane, at thair villagee on the Gila river, have a very prosperous commanity of ahout 12,000 soulo, cultivatiug succesafnlly wheat, corn, barley, cotton,
heaos, peas, and other vegetables.- History. The Colorado valley was an early neut of spanish civilization, and missionary enterprise. The Sunta Cruz, and its tritutaries, teenad with an agricultamal and mining population, early in the 18th century. The relice of the lasy industry are still seen in the rnine of cities, cathedrals, and farms, scattered up ani down the Colorado aud ite brachos. Bat priest and laymau, alike, fell bencath the torashawke of the Apaches. The sunta Cruz region was occupied by Jesuit misnionarits, as early an the year IGOM. The mudern history of $A$. is connected with that of Now Mexico, from which it whe enparated in 1863 .
It is governed as all the other territories. Iop. (1870) 9,$658 ;(1880) 40,441$. See also on p. 206 ,

Arkaslel phia, in Arkansas, a post-villoge, cap. of Arkan'sas, a large river of the U. Stat
the Kurkys, a large river of the U. States. It rises in and the Indian Territory; aod, pursuing an E.S E direction, unites with the Miseissippi in Lat. $33^{\circ} 55^{\prime}$, Lon. $91^{\circ} 10^{\prime} \mathrm{W}$. The river bas a conree, following its bends, of about $2,170 \mathrm{~m}$. It has several inportant trihutaries. of which the Great Canadian, falling into it on the right, is the principal. Daring the periodical swoll, the A. is navigathle to the Kocky Monotains; aud at other times at nay be uavigated for about $6 \cdot 0$ un. from its con fluence with the Misoissippi. Its nevigation is safe, heing nuinterrupted by rocks, shoals, or rapids. If the tributaries of the Mississippi, the secund rauk is due to the the A., it veing longer, aud draiviog
the Ohio, Mississippi pruper, or Platte.
Arkan'sas, in the U. Statee, n S.W. State, bounded N by Mssouni, E. by the Mlississippi river, S. hy Lontistana and Texas, and W. hy Texis, and Indiau Territory. Alpresents features of soil, climate, and productions witich naturally associato it with the southeru States. It hes hetween $33^{\circ}$ and $36^{\circ} 30^{\prime} \mathrm{N}$. Lat., and hetweeu $89^{\circ} 45^{\circ}$ and $94^{\circ} 40^{\prime} \mathrm{W}$. Loe. Its leagth from N , to 8 . is 242 m its breadth varyiog from 170 to $22,9$. - Areu, $52,19 \mathrm{sq}$ m., or $33,406,520$ acres. - Hist A. takes its name from the river Arkansas, $q$. $v$. It was discovered and settled hy the French, under the Chevalier de Touti, as early as
1685 . In the various trausfers of territory, it folluwed the fute of the other portious of Luisiona it wa erected iuto a separate territory iu 1819 , aud into a State in 1836 . It joised the so-called Confederate States by an act of secession from the Union, passed May 6, 1861 ; hut was conquered before long hy the army of the United States. In 1868, a new constitntion was adopted, by a convention elected io pursuance of the acts of Cougres on reconstruction, and in Jane of the same year, $A$. was re-admitted to representation in Congress. This cunstitution was revised in 18\%4. Desc. The physical aspects of the country preeent a remarkable variety trum the Murisippi is a low murshy pluin, shoundiug in lacouns and supi, a fow marshy plan, abounding overflow of the Missiseipi, and ito tributaries. Towerd the centre of the State, the lisod rises into liille, eniarg ing into the Ozark mountaink, the highest elevation of which is not over $2,000 \mathrm{ft}$. This chails eaters the State in the N.W., dividing it into two unequal portione, one of which, io its physical character, assimilates to the Northern, and the other to the Southern States. Beadee the Arkansas river that passes wholly through the State from W. to E., and the Missiasippi which re ceives all its waters, $A$. is drained in the N. E. by the White river, and the St. Francie, with their affluents in the S.W. ly Rel river; and io the S. by the $W$ ashita, anil its numerous tributaries. The interah improvements of $A$, are confined largely to latees, or embank ments against the Miseisaippi. Ot extensive and
widely diffused internal mavigation of the State las eupplind so well the limited wants of a hitherto aparse population, that railmads have not beeo completed to ny great extent. The total number of miles of rail road, completed and in operation at tho begiauing of the year 1883, was a little under 1,000 milee, with more in construction and in contemplation. A singular phe-
nomenon In Fot Springs county, 60 m . $\$ \mathbf{W}$. of Litle tomenou in frot springs county, 60 m . S.W. Of Litle as well as of the puhlic genenully. Arminiain, $n$. One profeseing Arminianism
Armin'ianism, $n$. (Eccl. Hist.) The doctrine of Ar minins, a Protestant divise, (q. v..) who maintained that God had predestionted the galv foreseen who wonld and who would not accept of offered mercy. IIie chief op ponent was Gomar, who, with the Calviniste, asserted that God had from all etervity, of his free geod pleasure, elected some to everlasting life, while he had left others to anbelief and consequent perdition. Aiter the death of Arminins, in 1609, his followers rapidly increased, aod were vehemeatly attacked by the Catvinists. In 1610, they addressed a petition to the Stater of Holland for protection, from which they got the wawe or Re strance, and in 1614 the Stutes issued an edict grantiog strance, and in 1614, the Stutea issued an edict granting
full toleration to hoth parties. This displeassed the Calviniets, who continued their persecutions, and at length, in 1619 , the doctrines of the $A$. were condemned by the synod of Dort, and their clergy were driven frum their churches, and forhidden the exercise of their ministry in public. Owing to this step, many left the conntry, and found refuge in France, England, and other placee. The views of the A. are enmmed up in the following fire urticles:-1. That God had, fromall eternity, determinea to save all who, he foreanw, wonld persevere in the faitl, 2. That Christ died for all men; but that only those who telive are really saved by his desth. 3. That man is of himself iocapable of trne faith, and mast therofore be born ngain, of God, throngh Christ, hy the Itoly Spirit. 4. That all cood works are to be attributed to the grace of the Holy Spirit, which, however, does wot force a man against his own zoclination. 5. That God givee to the truly fuithful the power to resist sin. With respect to the possibility of a fall from the state of grace, Arminine and his imnsediate disciples were nnde-
cided; hut his followers came afterwards to the helief cided; hut his followers came afterwards to the beliel
that it was possible. After $11 / 30$, the A . were wgain tulthat it was possible. After 14,30, the A. Were again tol-
erated in Holland; but from that time, their opinions erated in Holland; but from that tine, their opinioned more and noore to freedom of thought, und the rejection of ereeds and confessione. They chiefly bnild on the necessity of moral daties and good works nad allow nech one to interpret the Koly Scriptures for limeelf. They reject maoy articles of fitith, and do away alnuat entirely with the necessity of succor from the IIoly emall body; but their temet, twindled down to a very predestination, haveir tencts, more especiaily regarer de oominations, ins the Wesleyon Mrthodists, as well as by numerons individaal merubers of other churches. Armin'ins, or Hsnmans, who by his intrepidity and was son af serimer a clicf of the therusci lluving was son of Segimer, a chief of the cherusci. llavitig
been sent to Rome as a hostage, he was there educutel, served in the Romnn army, aud for him valor was raised to citizenship, nad knighted. But his uttachueut to his native conntry indnced hint to revolt, nat lie became one of the most powerful leaders of the dimeontented German mations. He drew Varme, the leman comanamier on the Khine, into that ambuscale in which lie and nearly all his troops were slain, and completely hafled Germanicus; lint, After baving for gears withatoond the vast jower of Itome, Arminius was hasussimated by one

Ar'iny, an aroy is the whole armed force raised for the tefeace of a country by liand. In a limited eense, it denotes a large hany of soldiers, consistiog of horse ammunition, provisions, dc., ubder a coomander-inchief, baving lieutenant-generale, major-geoerals, brigadiers, hod other officers uoder him. As A. is geaerally divided ituto a certain wumber of corps, each consisting of brigades, regiments, battations, and aquadrons; when
in the field, it is forment into lines. The first line is in the field, it is furmed into lines. The first line is called the vanguard, the second the maie body, the third
the rearguard, or corps of reeserve. The middle of each the rearguard, or corps of reserve. The middle of each
hias is occupied by infantry; the cavalry furms the right hias is occupied by infantry; the cavalry furms the right
and the left wing of each lioe, and sometimes squadroas of horse are placed in the spaces letween the battalions -The materid of an army, as the French term it, consiste of the horses, etores, provisions, and everything guished accordiog to their mutaer of service, as blockauling A., A. of observation, A. of reserve, kc.
(Hist.) The earliest trained $A$, of which we ligg of Ejypt, about 1600 B. c. It was organized for the purpose of conqueriag the world, and consisted, accordiag to Diodorus Siculus, of 600,000 infantry. 24,000 cavalry, aad 27,000 war-chariote. In the reign of David, the Jews acquired conciderable military ekill. Solommen introduced cavalry, and also be diatiuguished for their military achieviments. The strength of their army, however, consinted io its cavalry. Tbeir infantry seems to have lieen little better thao an armed mob, and hence the reppated defeate that they sustained from comparatively small bodies of Greeks clusive of the sea forcea, to have amounted to upward
 of $2,600,000$ flghting-men. Arrian mays that Darlun brought into the firld agninst Alesander, $1,000,000 \mathrm{fn}-$ fantry, 40,010 cavalry, 200 charlint arned with wrythes,
and many elephuntm. In Greece, the people were early and many elephantm, In Gres'e, the people were early
Inured warma, and among them the Sjartane were pre-
eminestly dietingeished for their perfect discipline, and high military training. They first iotroduced the pha lanx, a particular mode of arrangiag the intantry, (see we are told that they had 10,000 heavy-armed troops at warathon. The Macedonian A. of Philip was the first standiog $A$. io Greece, and ia its train we fiod artillery io the form of basilte aud catupulte. In Alexanders we find that a fantry, 16,000 light iofantry, and 4,000 cavalry, besidus eeverni thousand anxiliaries; making an $A$. altogether of probably $60,000 \mathrm{men}$. The Carthagimank under llannibal onsy be estinated at, at least, 160,000 Tuc Roman $\boldsymbol{A}$. in its best days surpassed, in organization and discipline, all preceding armies. Its basis was the logion, comprising both infantry and cavalry to the extent of frome about 5,000 to $6,000 \mathrm{men}$, (Bee Legion.) Their cavalry had nearly the same armor as the heavy-armed intantry.
The total number of Roman legivus under Angustus wits The total number of Roman legieus under Angustus wis corrupt days of the eappire, their military power declised end degenerated into a feebie militia, which was easily overthrowe by the Northern barlariags. After the sub veraion of the Boman empire, the fcudal system which w.ss introdinced, was hosile to the establishieent of large armics. Mititary gervice was the tenure by which secupiers held their lands; and while the barons exjoyed unlimited suthority over their vassals, nod were fre quently at war with their neighbors, there were no great armiee. In the 1lth century the Crusides aroused men' miads, and called forth the whale enerpies of Europe. Mighty armies were marched into Asia to deliver the Holy Lasod from the domination of the lntidela. Chirles III, of France, was the firet to introluce standing arThe history of modera armies may, pruperly, date froo the iovention of gonpowder, und is divided into 7 pori-ods:-1. From the first employment of caunon to the campaign of Charles VIII. in Italy. 2. From the eud of the 15th to the middle of the 16th century: it cont prises the Wars of the Freach, Germans, and Spuniarde in Italy. 3. The war of the Independence of the Nrlherlands, from 1568 to 1609 . This war led to great improve-
ments in the organization and tactics of armics. By ments in the organization and tactics of armics. By
skill and discipline, a people, avotly merchante and skill and discipline, a people, owostiy merchant and
manafacturere, nerved by oppression, coped with had isaominiously expelled from their country, the forces of the then greatest European military power. 4. The period war Guatavios Adolphus grently 1618 to 1648 . In this war Gustavas Adolphus greatly doned the denee formatiou of his predecessors, introduced lighter weapors, and made maay improvoments in artillery. 5. Comprehende the wars of tbe French it Italy, Germany, and the Netherlands, as well as the Northern and Tomkish wars, and embraces a period of
90 yemrs, from 1648 to 1738 . In the wars of Louie XIV 90 years, from $16+8$ to 1738 . In the wars of Louis XIV.
during this period, great improvements were introduced during this period, great improvements were introduce
in the art of carrying on military operations, under such in the art of carrying on military operations, under such opposed to thena were Marlborough, Engeae of Savoy, and other commanders. Staodiag arolies uow attained an extent hitherto unexaupled. Iostead of the $14,000 \mathrm{meo}$ maintained by Ilenry IV., Louie XIV , after the peace of Nimeguch, had an $A$. of $138,000 \mathrm{men}$. To this period, too belong the wars of Charles XII, under whurs the Swedish infantry reached a high degree of perfection. 6 . This perival includes the three silesian wars, and extends froos 1745 to the breaking out of the French revolution
io 1792 . The Prusbians lad been for gome time increas. is 1792. The Prussians lad been for oome time increas-
ing their standiag army and improving their military ing their atanding army and improving their military
discipline, so tinat when Frederick the (Grent ascended discipline, so that when Frederick the Great ascended
the throne, in 1740 , he found hiaself at the head of an efficiont $A$. of about $\$ 0,000$ men. This $A$. he greatly itrefficinnt $A$ of about $s 0,000$ men. This $A$. he grently itr-
creased and improved, until Prussian tactica becane- a puttern for all other Earopean states. The 7th, and hast period, extends fron the first French rovolution duwn to the present time. The standing armies and the military acience of this period far ontnumber aud surpass those of any one preceding. - Under the names of the principul modera nations will be
their reepective armies.
Ar'uauld, a Spanish churchman, who lived in the 13th Ar'aryld. an analig.
Ar'uatild, an ancient French family of Auvergue affaire, and frum which aro here selected:
A.. Antonnz, an advocate at Paris, g. 1560, dietingulabed for his powerful uad successful detence of the university of Paris againat the Jesuita, in 1594. By this lie drew of hituself the hatred of the Jespitn, but remained, till his death, in 1618 , in posseraion of his honors, nud was esteemed the greatest lawyer of hin time. IIs twonty children formed the rallying point of the sect of Jansuniste (see Janeenius) In France; the danghturs ant grand-danghtersas nuds, in Fort Roynl, thesuna ns nemibers of the learned aclety, who nhut thenselves up in
this monaitery, and are knuwn water tho name of Mfesthis monastery, and are known unter tho namo of bra-
sieurs $d u$ firt Royal. A son of lis eldest danghtor, Inate le Mattre de Sacy, ulso united himaclf to thin mociety, and, wi tranalatorof the Bitile that appearud at Mons, ety, and, wa tranalator of the Bible that ajpearud at Mons,
played an important part in the history of Janminm.
 Itoyal, in 1588 , died in 1074 , made himself known as a very correct Fronch writor, ly his religionn poense ami
tramets, sud him tranalatione of Josephiun's Iliatury of the Jows, anll of Davila's works. Ite wis far aurpassel in intellect by his youngent lirother. o, Ansoine, known ws the Grrat A., was tho youngent child
of the lawyer Anteine, n . 1612 . Under the guidance of
the abluot of St. Cyr. Joba dn Vergier de Hanradne, first head of the Jasisebists in France, he devoted himeelf to of the Sorbonne. In the same yeir heng tue doctors of the Norbonne. In the same year, he attacked the Jespits in two Works, De la frequente Communion, and
La Theolngie Morale des Jesuites, the firet of which occasioned nuch controveres, because it epplled the priaciples of the Jasamists to the receiving of the sacramedt. He excited similar coutroversies liy his work, tue de St. Pirrre et de St. Pupe, $16+5$, by the opinion therein maintained, that the se founders of the Reman Catholic Church. Atter 1 t 50 , whes Jansenism had become an object of pullic odium, and the watchword of an important party in the state, Armand engaged is all the quarrels of the Fisench Jadseniets with the Jesnits, the clergy, and the government, Was their chel writer, and was considered their head. The intrigues of the court occasioped his excinesion from the Sorboane, 1656 , and the persecutions which conspelled him to concesl himiself. After the reconciliation
letween Polue Clement IX, and the Jansenists, 16 tis, appeared in public, and eajoyed the homage which even
the court did not refnee to his merits ead talents. To satisfy his love of controversy, he attacked the Calvinists in meny controversial tracte, and, with his friend Nicele compored the great work, La Perpetrute de la Fin de $r$ Eglise fathol. touchant ${ }^{\prime}$ 'Eucharistie, in opposition to them. Gnaccount of the uew persecntions of the court, or rather of the Jesuits, he fied, in $16 i 5$, to the Netherlauds, employed himself, in lis exile, in controversial writings againet the Calviniste and the Jesmits, and died, in want, at a village nuar Liege, 1694. He was a man of a vigorous and consistent mud, full of solud koowledge litterness thoudunnt in in wringo, bold and violent to morals. He is acknowledged to liave dome much for the improvemat of moratity is the Catholic Church; yet would hie genime have leen far more usefnl to the Church and to literature, had not his bituation and character involved him in a multitude of controversies, which readered his literary activity, for the muet part, fruitleas to pusterity
Port Regid daughter of Robert, s. 1624, abbese nt Port Royal des Champs, where she had been educated by her awat, Marie Jaqueline Augelique A., sister of the great $A$. She was a deterbaned ansenist, as were all which was her conventual name, hud much to eodure, but she met misfortunes with intrepidity; in 1684. She was tearaed without being pedantic, pious without bigotry, and gentle to others in propurtion ts the wis gevers to herself. - See Port Royal des Cuamps

ARSE
ART

Arsa'eldes, in the S. Pacific ocean. See SoLomon Is-
Ar'senal, $n$. [Lat. arx, arcis, a citadel.] A term general. apphed to any juace where maval or pullic establishment where the munitions of war are masuffactured and

Ar'senal, in Pennsylvinia, a post-office of Alleghany co. Arwe'niate, Ak'sentre, $n$. (Cient.) A s.lt resulting from the woion of arsenic acid with a bise the A. are generally iosoluble in water, bnt very solnble in an ex of the acid. They are decomposed at a red heat hy chas coal, and yiem the churact risac garlicky smen of the netallic vapor. They are geucrally unimportant in the arts.
Ar'senie, n. [Fr.; Gr. arsenikn, from arsen. mals, force.] (Chein, und Min.) A very soft, brittle, and emiforce. ] Chem, am Mm.) A rery soft, orithe, syonbol As. It is scattered in great abnadance over the mineral kingdom, and is sometimes found in the free state, but more frequeptly combined, chiefly with iron, niekel, coc balt, sind sulpliur. It is also contained in very suall quantities in many ruiaeral springs, Io order to separate $A$. from any of the metallic ores in which it oecurs, the org is rossted, or exposed to a current of heited air iu a reverberatory furnace. A. was known in difterent combinatione by the abcients, but has only latterly beell known to be of asetallic origin. It is, however, 80 unlike netal in many of its properties that, even now. certai French chemists consider it as behnging to the noumetallic elements; indeed, it may he considere tements antimony and bismuth lieing closaly connceted with it o the ove hand, and phosphurusand vitrugen on the other A.combines with the atowospheric oxygen, forming arsiic and arsenions ucids. Metalic A. mity be formel from arsenious acid by mixing it with ch orcoal and sodimm carbonate, and heating in a closed crucible, the upper fart of which is kept cool: A. condenses in the con part of this apparatos as a solid, with a brinhant grayish lus are. It taroishes in the air from oxidatiou; it has a spgr, of $5 \%$ to $5 \%$, and when heated to $5010^{\circ}$ Fahren., it vol tilizes as a colorless vapor witbont uodergoing fusion, and this vapor possesses a remarkable garlic-like smell. A. wheo hested in the air, takes fire, and
bluish flame, forming arsenjous oxide, $A * 0_{3}$; when brown in to ehlorine it instantly takes fire, forming $A$ trichloride, $\mathrm{A} \times \mathrm{Cl}_{3}$. Metallic A . may be reduced to jow der in a murtar, nod is not considered poisonous; but when introluced into the suimal system, it is in part oxitized, thus wequiring poisotious properties A minute unatity of $A$. is added to lead, to diminish its echerion, durisg the manufacture of shot. It is the ouly use to which the metal $A$. is applied in the arts. Its only important combinations are: arsenic and arsenums detus, q.v.:
the bisulphide, or realgar, $q$. $v$, which is used in pyrothe bisulphide, or realgar, q. v, which is used in pyrois the king's yellow of the artist. A. also forms a terliydride with hydrogen, abdiogous to the ammonia-lik compounds formeal tuy untimony and phosphorus.
compourads fromed by antimiony and phosphorus. of arsenic, or of ont of its componnds, begin to appear in a quarter of an hour, or not much longer, after it is tiken. First sickuess and great distrons at the stumach, mon followed by thirst, and luroigg heat in the stomach. Then come on viohent vomiting, atod severe colic pains, and excessive and painfil purging. This hrings on faintiugs, with cold swests, and other signs of great debility. To this succesd painfil cramps, and contractione of the legs and thikhs, oxtreme weakness, und death. No effective chearical astidore has yet heen discovered. At the first syuptom of poisoning, freshily-precipitated yu at coce adminiateresl. Too often A., principally arse sious acid, hus becu used us 4 means of destroying anional
 its discovarer; bint the must perfiect, rince it detects A. in a liquor contain-
 manterfal ly treated with dilute enliphuric aciil, num metul. Hic zinc, Io a gun-genorating upparatum, whan the A.

Arsen'ie Acid. Apsexic Oxras. (Chem.) This scid, trioxide (arsenious acid) with nitric acid, evaporating to rioxide (arsenious acid) with nittic acid, evaporating to
drymess, and hestiog to a tempersture of $270^{\circ}$. It forme dryness, and hon-crystalline white powder, which, when atrongly n. non-crystalline white powder, which, when strongly
heated, decomposes into $\mathrm{AsO}_{3}$ and $\mathrm{O}_{2}$. This powder fs readily dissolved by water, and the solution yields crystals of $A$. ncid, or trihydric arsebate, $3110, \mathrm{AsO}_{5}$.-Arsebic acid is a more violent poison than even the arsenjous. It is used in taxidermy, aod in making anilioe colors.
Arsen'ical, $a$. Consisting of, or contannig arsenic
Arvenicate, $v, \alpha$. To combine with arsenc
Ar'senide, Arseni'nret, $\boldsymbol{z}$. (Chem.) A compound of hydrogen is formed by decomposing an alloy of arsenit and zioc with sulphurie aeid. It is a colorless gas, posessiog a letid odor of garlic; it acts as a most deadiy poisun, a single bubble of the pure gas having been to a colorless liquid. Arseuiureted bydrogeo burns with a bluisb flaze, and deposits arsenic upou a cold body lueld in the flame; below a red heat, it is decomposed ioto arsenic aud hydrogen. Density 39 ; firm. $\mathrm{AsH}_{3}$
Arseniosid'erite, $n$. (Min.) A mineral having filmou concretions of a yellowish-brown color, approaching to golden, resembliog escoxenite; the fibres large and powder yellowish-ruwn rather deeper than sellow powder yellowish-orown, rather deeper than yellow co the pestle, amp. Arsuaic uid $37-1$, skquioxide er iron $42 \cdot 1$, lime $11 \cdot 1$, water $9 \cdot 9=100$. It occurs in nuan-

Arse nions Aeid. Arsenfous Trioxide, White Aay the (Chena.) A white substanee hnowuin commere yrulent pois of whate arsemac, which is one of the mos ocurs in poisons of the minetal king dom. It frequent obtained in rossting several ores, particalarly those of eobalt. In the chimneys of the furnaces where thit operation is cooducted, it givaernlly condenses in thick emi-transparent masmes, thongh ametiones it ussumes the form of a powder, or of little needles, in which stat was formerly called thowers of arsenic. The A. A. red ens the most bensible blue vegetablo colors, thowgh becomes ojrapue, and covered with a slight efflorescence thrown $u$ o incauduseent coals, it evaporates in whit fumes, with a strong smell of garlic. In close ve-ssels it is volatilized; and, if the heat he strong, vitrificed The result of this vitrification is a transparent glass, eapa hle of crystallizing ia reg. octohedra, the angles of which are truncatud. It is casily attered by hydrowea un carbon, which deprive it of its oxygen at a red heat, und retuce the netid, the onc forming wather, the other car-
 chloric acid, and is fouly solulde in sulntions of the alkulies. Deusity (of vipur) 49. ip. 3 . 3.6 , form Aso As ordinarily sold in quintitios nuler 10 lbs, wo weight the $A$. $A$ is required by law in burope, to be eoluch with i of its weight of indigo, or is of its weight of soot; the object of the admixture being to render any fquid to which the A. A. nught he added with it min derous inteot, of a black or bluish-black bue, mind thu indicate the presence of aompthag unasual. The solution of A. A. in water is recopmized by three tests 1. Hylrosulphuric acid in acid solutions produces yellow precipitate of sulphuret of arsenic, Ass ${ }_{3}$, solu be in ammonia. 2. Ammonio-sulphate of copper, od
 arsenite of silvar, $2 \mathrm{~A}=\mathrm{O} . \mathrm{AsO}_{3}$. The quantity neensiaty to destroy lite, of course, varies, thit it is stated that ? or 3 grains may prove fatal. Heath may uccur in a few hours, or aft.er the lape of days. A. A. has luell usin frequently as $h$ alow poison, the synptons being attribinted to inflammation of the bowels from natnra cunses, but its detection is thaw easy. (Sue Auseme.)A. A. has long been used as o medicine. When taken into the rlomach, it is soon absurbeal into the blood, und circulates with that fluid, exlibiting great power over eerfaiu disenses, expecially thill diseaser, as psorimsis,
Inpra, vezema, \&c. It is ahoo clasked among the tomic l-pra, "czella, sc. It is ako classed among the tomi

Ar'tevelde, Jacob vin, a celebrated Flemish patriot of the 14th century. His riches, eloqneuce, and experi-
ence it diplomatic bnsiness put himat the head of affairs ence is diplomatic bnsiness put himat the head of affairs
in his native town of Ghent, at a time whem the Fleminga, sulject to Lonis I1., conat of Flandere, had resolved iogs, subject to Lonis II., conat of Fandere, had resolved certain oppressive impusts. The French wars of Edward certain oppressive impusts. The Erench wars of Edward of the discontented Flemings against the lord-superior of the discontented Flemings aganist the lord-superior
of their count, Plilip Vi. of Valois, presented a favorable opportunity for revolt, nud accordingly, in 1339, A., acting for the dnke of Brabant, the cities of Louvain, Ghent, and others, conclnded a treaty with Edward, by
which the English king, atyling himself king of Frabce, which the English king, styling bimself king of Frabce,
was acknowledged lord-superior of Flauders. The defeat, however, which he snstained at St. Omer, obliged him to make peace with France, and a rupture eosued between the Flemings and their new superior. The
alliance was revived after Edward's reoewal of the w.ar with Philip, and he was now persuaded by A. to make With Philip, and he was now persmaded by A. to make
his son, the Black Priace, count of Flanders. This project was defested, and $A$.'s career terminated, by a revolt ject was defested, and $A$. \& career termanterity. A., and
of the citizens of Ghent against his anthority
50 of his friends, were mardered by a rabble of their 50 of his friends, were mardered
fellow-citizens, on 2 d May, 1345.
Artevelle. Pqilip vin, son of the preceding, inheriting his father's wealth, and something of his ambition and ceoins, lived io quiet in his Dative city of Ghent, till 1382, when his fellow-citizens, having revolted from Connt Louis III. of Flaoders, summoned him to the chief command of the city. After summarily avenging his father's death, A. oblized Lonis to raise the siege of Ghent, and pnrsned him to Brages, where the Ghentois gained a great victory, which resnitted in the flight of Lo the dictatorship of $A$. Charles VI. of France then to the dictatorship of $A_{\text {. }}$ Charles VI. of France then the count. On the 22 d Nov, the French army, in which the king linuself took a subordinate command, met the Fl-mings, commanded by $A$., at Rosbeck. The battle which ensued resnlted in the defeat of the Flemish troops, 9,000 of whom perished on the field, and 26,000 in the pursnit. $A$. Was fonod among the slaio. A.s

which the tongues of mankind are divided. The fumily family: but it is beld by the more scientilic gramma rians of the present time, that the $A$. is the most appro priate technical tern, inasmuch as $A$. was the name in intia to suttle upon the who tex of Europuent tome in India to suttle upon the shores of Europe. There are
 which will te trented of in their proper placess To deal bere with the $A$. languages:- The $A$. family of langoiges maty, at the outset, be broadly classified into two reat divisious: The Sontherd division, containuig two great classess, the Indic and Iranic. The Indic branch comprises within itself, as living langnages, the dialects of ludia, and the dinlect of the Gypsiess, as dead hanEuiges, the Praikrit and Pati, the modern Sunscrit, and
the Vedic Sanscrit. The lrame branch comprises, as living lauguages, the dialects of Persii, A A fhanistim, Kur ing languages, the dialects of Persii, A fghamistam, Kur astan, Butuara, Armenia, Osocthi, and, as dead lan Dargus, the Parsi, Pehlot, Coe cuneiform inscriptions on The Nurthern division of the A fimily of Amenage containes 6 cinef classee. 1. The Celtic has two brunche the Cymrio and the Gaelic. To the Cymric belwn the didects of Wates and Brittany, and the Cornish, the last being a dead language. To the duelic branch of the Celtic class belong the dialects of Scothand. Ireland and that of the Isle of Mab, or Manx. 2 The Itahic class embraces the dialects of Portugal, Spain, Provence,
Frunce, Jtaly, ind Wallachia, as well its the dead lanFr.unce, Italy, ind Wallachia, as well its the dead lan-
guages known as the Langue d'Oc. Langue doil, and the guages known as the Langue d'Oc. Langue doil, and the
Oscan, Lation, and Unitrian. 3. The Illyric class conOsean, Latia, and Unibrian. 3. The Clyric class con-
tains the dialecta of the Grisons and Allamin. 4. The tins the dialecte of the Grisons and Allinin. in . The
Hellenic class comprises the dialects opuken in Greere at
 and lonic, the fur latter being dead langaagee. 5 . The Wendic class comprises within itselt the living dinlects of Lithuanib, Courland, and Livonia (Lettish), as well as the old Prussian, which last is reckoned as a dead language; the living dialects of Belgium, Russia (Great, Poland, Bohemia (Slapakia), and Lostia; in this clas also are incladed the dend languages known as the Ecclesiastical Siavonic, the old Buhemian, and the Pala bian. 6. The Teutonic class contains: the High-derman branch, in which are included the living fliatecto of Germany, and the de ul languages called the Middle High Germmand Oid li-german; the Low. German braneh, continning the living dialects of Eagland, Holland tugether with the Gothic, Anglo-Saxen, Old Dutch, Oli tugether with the Gothic, Anglo-saxen, old Dutch, Old
Frisimn, and Old Saxum, the five latter being dead languages. The scandinavias branch comprises the liviog dialects of Denmark, Sweden, Nurway, and Iceland, as also the dead lagguge known as old Norse. It may now be asked- Why are these great streame of luuguage, rollhg on through centuries, set dewn as converging to one common suarce? To this question the greatest phitologists of our day reply, that in all these lan-
guages and dialects, the combon roots and the comolon orginic type are deducibie by weans of a comparison and from a scrutiuy of the laws of the human miad. of Our orgails of specch and of hearing, HB well as of the to assert that all the datects of the Indo-Oernaoic family hate diverged from terts of tho tyo-Qernaasic fam he mble to provethis to le the original laminage? It may have been the language of conquerurs which bad pushed away und servived numerons previous idiemas All that we can say is, that in the $A$ languages, the only field in which the scientific comparison of hanguages has in yet heen soccesstully progecuted, the clusist affinity bas inen discovered in the reots and in the inflections, those two great tests of all inflecting lanzuages. Did our space permit, an oxtensive list of examples might be given io
a tatbular form, to provo the untuistikuble fanily like a tatualar form, to provo the unnistakable fanily like
ness which exists between the chicf representatives of tho great $A$. fanily of languagee. We must, however rest content by referring the reader to some of the moe Asiatic Recarches. Fr whe sumel's L. ber die Syracke und

Asclepi'ades, the descendants of the god of medicine Esculapius. by his ens Podiliriue and Buchaon, spread, together with the worsbip of the gnd, through Greece
and Asia Minor. They formed an order of priczte which preeerved the results of the medical experience acquired in the temples as an bereditary secret, aud were thus, at the satme time, physicians, prophets, uad priests. They lived in the temple of the god, and by exciting the inayginations of the sick, prepared them to receive healing dreams and divitue apparitious; observed carefully the course of the disease; applited, as it is believed, besides the conjurations and charme usual in antiqnity, real magnetic renedies, and noted down the results of their practice. They were, nccordiugly, uot only the first
physicians known to ns, but, in fact the founders suluntific medicies, which proceeded from thanders ot sutentific medicine, which proceeded from their society
At first, this order of priests was conlined to the timily of the Asclepiades, who kept their thmily register wit great care. Aristides celebrated them by his eulegiume at Srayrna. Hippocrates of Ces, the founder of acientific physic, derived his origon from it, uud the oath administered to the disciples of the order (jusjurandum $H^{\prime}$ p
pocrats) is preserved io his writiogs.

Ural mountains. The principml slraits of A. ars, Beh riafs, dividing it trom N. America; Corea, betwern Chias and Japoto: Formust, sepurating that islated from China: Peronse, and sangor in Japan: Malacen, betwee the island of Sumatia and the Malayan penimstar; Orrus or strait of Constantiouple. Of bays and gulfs, the mist remarkable are the sea of Kara, and galfs of Ob and Khatanskaia, od the $\mathbf{N}$. ; all conbected with the Arctic ocean. Tho seas of Auadyr, Kamtsebatkal, ath Okhotik, on the N.E ; the sea of Japun, tiulf of Tu'tury and Yellow sea, on the E. ; and the Chiaa sea, nal (inil of Tonquia, on the 太.E ; all condected with the Pacitic. The galfs of Sianm and Martabsa, the Bety of Bengal, th Arabian and Red sels, and the gulfs of Camlaty aud Cuch, together with the Persian gulf, all furunt junction Nith the Iadian ocean. There are, oesides, the Gmis of the Levant, an I A rchipelago; and 8eas of Mumora, the Eit xine, and that of Az iff, ill associated with the Meditetraivers of the first magnitude. Of sachate the Oly, the- It mesei, and tho Lena, flowids into the Aretic uce un. Enter ing the Pacific are the A mooror Saghalien, tbe Howar-11. Yug-tse-Kiang. and the Cambodia; and faling into the Indian ncean are the Irrawadiv. Bruhmapootra, Ganges Godavery, and the Indas. In the W., the Jiboun sod shoun empty into the sea of Azoff. With the exeer tions of the Amazoo and the Mississippi, the Obi hits the largest basin of auy river in the world. The lengths of some of these rivers are as follows: Yiog-tse-Kiand Obj, 000 : Huang-IIo, 2,000: Indus, 170); Ganese 1,557; Brahmap.otra, 1,500; 1rriwaddy, 1,200,- Lalies possesses the largest inland lake in the world viz the C.spian sea, covering as area of $140.000 \mathrm{sm} . \mathrm{m}$. ; the other large lakes are Aral, Baikal, Van, and Balkash and there are numerous smaller ones. - Mountains. The orincipal systemsare those of the flimalityas, the Altai, the Thian-shato, and the Kuenluen. These gederally rum paraltel with the equator, and form the great con tral table-land of $A$, the m ist extensive on the globe. The entire length of the Ilimalayso chain, from Assam to the W. of the Hindoo-Cuosh, is about $1,800 \mathrm{1n}$.. witl Deaks which nre the loftiest on eurth. Among these, Comsanthan, to close on 25,000 ; Jamnobri and Vawli Dewi to about 26,000 ewh; Dhawalagiri, to 27.600 ; and lount Everest, the monarch of all mountains, to $\% 9,100$ foet. Nany of the passes of this range are abure 15.010 fect. while some reach even to as bigh as 18.000 and 19,000 fect above sea-level. On the N . of these monotains the perpetual snow-line is at 16,620 feet; on the S u,3xi. The Altai muatain system extends, under vations names, from the contlacnee of the Oby ane It tish, to E.st Cape; their whole deltith is ahout 5000 mh , and their breadth varies from ahnat the to 1,000 . Thi Thi ur-shate, or Celestial motatains, hive their rise it Tatary, and, taking a course newly along the tad parThuir highest summit is th. Bugdo-0ula a buge snowade elevation rising abruptly from a flat steppe, and held as sacred by the Kalun iks. The Knenluen monntains run nearly parallel with the Celestials, and alsi, in some places, with the range of the Hidioo-Coosh Ghey rise a little to the E. of the looth degree of E. Lon inl, under a variety of names, takea coprse W. and N. W and skirting the Caspian and Black seas on the S. finally termiuate to the $\mathbf{W}$. of the latter. These are the prits cipal mountains, bat other chains exist, which are compacatively bat little known. Folcanoes in active opera toa are found in Iceland, the island of Jan Mayen, and in Kamtsrhatka. Earthquakes are frequeat, and ocen
 ry knowo as Cutral A is cumposed of rast desects, called more generally stempes, of these the most exter ive is Gobi, or the Great Steppe, byins to the N. of the Kaegluen monntains, od the W. between the latter and the Thian-ghan raoge, and on the E . betwepn it anat the Altai. This is all a simily wiste of viast and imperfectly soown extent. The Gobi-shamo Steppe or "Sand sea, extends about $1,200 \mathrm{~m}$. in length, and h.is a width of between 500 aad 700 . The country which is inchudelbetween the two branches of the Kuediueo range, the Nad-shan and Bayan Kara ruonntains, is called Khoo-khoo-noor rom a lake of that name. This region is brt littl kown. The platean of Y O-nan, which formus the must southerty portion of the great table-lnd or Eistero A has an extremely diversified surface, comprising minn hains, in some places athove the ehow-tine, and sman in Persia, has a length of about 300 m , by a breadth of 210 .-Islands. The principal are those of Japan, Eaghalien, Formosa, the Philigpmes the islands of the Eustern or Malay Archipelago, Ceylon, \&c.
III. Minerals. - A. abounds io gold, and precious stoues in great vallety; diamonds are fougd in Trindo tan, the Ural mouotains, Borneo, Ceylon, de.; gold in the Altai chain; silyer in China, Adnam, Aslittic Russia \&c.: tin in Banca, and the islands of the Malayan archipelago; copper, iron, and mercury in Jupan, China, Northera China, Bensul, aud other becalities; and salt ie very generally diffused over the entire surface of the continent. hent view of the more importint botadical productiols of A.-Fokssi Taress: Bambon, Burch, Chestnut, (y)press, Fir, Larch, Nangrove, Myrth, Oak. after transplantacion. The seed-bede are usually $\&$ fer orodd; the transplanted plants are generally in rows, at eveu 18 iaches from row to row; whit sollectimes the seeds are sown is the permaneat beds, and merel thinged out to the proper distance. The suil in every
case is as nearly as possille a dry, sundy, likht, mellow loam, treached to the depthof $21 / 2$ or 31 eet, and very pow
erfully manared. A covering of dung or litter is lait over the beds in wister, to protect the plants Irum the Irest : and io spring this coverigy is raked off the phuntand dug into the alleys, and the bedsare stirred with a fork io order to increase absorption of hese mbd air, und the infiltration and ascent of moisture. Plants raised uc choots in excellent condition frum the bith to the 15 th ith year after sowing: and they they be forciel ata or two by warm coverings of dang npon the lieds, or cx tensively forced, but with the speedy death or the roots, by lifting the plante, and placing them on duag or tan

Aspar'tates, n. pl. (Chem.) Aspartic acid is monohasi the formula of its noriaal salts being $\mathrm{C}_{4} \mathrm{I}_{6} \mathrm{MNO}_{4}$ likewief ferme basic salts or asparhites, the composition of which is net very clearly made out. The $A$. of the alkali-metals are suluble, and taste like broth. The active and inactive $A$. agree in composition, and in mos of their properties, differing only in solubility, crystal spar'tie Aeid. Asparayic Act,
Aspartie Aeid, Asparamic Acm, $n_{+}$. (Chem.) An of asparagiae, chiefly under the influence of itcids of sikalies, or by the action of beat on the acid malut maleate, or Iumarate of ammonium. The acids obtained hy these two processes are identical in composition, hu
differ io their relations to polarized light, the former perinatctive. A. ucid cry tallizes in small crystals belonging to the monoclini system. It dissolves in water, asd more easily in hydro chloric, and in nitric acid. Sp. gr. 1-6613-1.6632 at Aspa'sia, a celebrated a family of some note in Muletus, aull was early distion gaished for her graces of mind and perout. She came to Athens after the Persiau w.ir, and by her beauty and accomplishments suon attracted the attention of the leading men or that city. She engaged the affections of Pericles, who is said to have divorced his former wife in order to marry her. Their muion was harmoniods througbont; he preserved for her to the end of his lite the same tenderuess; she remained the confidaote of the statesman's schemes, and the eharer of his atrug gles. Their house was the resort of the wisdom and wit of A theus. Orators, poets, and philosophers came to listen to the eloquente of $A$;; and io their con-
versation, which turned opos the politics, literatore and metaphysics of the age, they deferred to ler anthor ity. Plato siays that she firmed the best speakers of her time, and chief amung them, Pericles bimseli. The sare Socrates was a Irequent visitur at lur salons, draw thither, it is insinuated, by the double attraction of eloquence and beanty. Anaxagoras, Phidias, and Alci biades, were also numbered amung her admirers. Th envy which assailed the administration of Pericles wit unsparing in its attacks on his mistress. Jealousy of foreigners, and dislike of remale infiaence, combined to offend the prejodices of the mass. Iler fearless specula-
tion aroused their superstitious zeal. Slue shared th tion aroused their superstitious zeal. She shared th
impeachment, and narrowly escapul) the fate of her impeachment, and narrowly escapet the fate of her
friend Anaxatgoras. She w.ss nccused lyy Hermippns of disloyalty to the gods, and of introlucing tree wotuen ioto her hodee to gratify the impure tistes of Pericles ino himeelf pleaded her canse triomphantly, und A. Waacquitted. She survived Pericles sonne years, and is re acquitted. She survived Pericles sonne years, andis to bive married an obsure Athenia, Lysicles whited she raised by her example and precept to be ou of the leaders of the republic

phire. This gem, when seets obliquely, emits a radian of the sun.
A-stern', $a$. [A.S. a, and stearn.] (Mar.) Any distance behund a ship, as oppused to a-head, which signifies le fore her; thus, if south is a-head, or ou the lime to which fies in or at the hiader part of a ship, or toward the hinder part; as, to go $a$-stera.
A*'teroid, n.: pl. Asteboios. [Gr. aster, a star, and eiffs, fortu, species.] (Astron.) Asteroids are a group of
bodies or small platets, siogalarly itasiguificaut in size, that revolve around the sun in planetary orbits, bet ween Mars and Jupiter. The existeace of a hody or boulies
between thase two planets, seensed to be indicated by a between thas8 two planets, seensed to be indicated by a
remarkahle hiatus. (Sce Buar's L. LW ) The celehrateid Olbers, of Bremen, veutured to assurt, that the application of telescopes to the search fir phatuts occupyiog that place would certunly be richly rewarded. Cuase quently, upon this su;gextian, Ceres was discovered by Ollesrs himself, soon after detected Pallas and Festa, and llardiag discovered Junn. Since then the nutnher of $A$, has been increased successively to one huodred and one; but the prububility is, thit they count by hundreds, and that they form a stream or zone of staall budies occupying the place, and io so fur performing the function, in the system, of the large planet which, acpected in the locality. Believing it to bentibuportant to pected in the locality. Believing it to benthituportant to of every one of these smill bodies, that every year iucrease in number, we limit this article to the tuost interestiog information relating to the character of the system. The nean breadth of the zove or ring within
which the $A$. lie, is -98716 of the mean distance of the which the $A$ : lie, is 97716 of the mean distances of the earth from the sun, or about 91 millions of miles. But in consequence of the great eccentricity of several of the orkits, som of these curious bolles canalventure much farther thas that into space. The inclination of the orbits of suveral of the A. prescats an extraordinary The greatest inctination kowwanaog the larger planTh. greateat inctination kowa armog the larger plan-
ets is that of Mcrcary, being $7^{\circ} 0^{\prime} 5 \cdot y^{\prime \prime}$; when the inclination of that of l'allias is $34^{\circ}+y^{\prime} 33^{\prime \prime}$. But their teviawhat the law of gravitation wonld induce ns to expect. Although the ellipses are ecceutric, and the inclination large, every one of these minnte oftis obeys the three cardinal laws of Kepler, ani so constitutes uo exception to the great harmonies of the solar system. From the observations of M. Leverrin'r it would appear that the sum total of the matter constituting the small planets lyiag between the mean distances of $2 \cdot 2$ and 3.19 from the
sun that of the earth heing 1), cannot greatly, if at all, exsun that of the earth heing 1), cannot greatly, if at all, exanss, how ver is vory considerable, heing pposards of miss, how $\cdot \mathrm{ver}$, is very cousiderable, heing upwards of
20 times greater than the mass of our moon; and it doubtless includes within it moltitudes of $A$. Dut yot discovered by the teleserpe. The contemplation of this very carions group gives rise to singular reflections.
How odd the mutions of masses of small orls, within paths so vear that they must often pass within sight in the celestial spaces-like ships within hail at scal But wheare came they? What meatos thisextraordinary exception to that general law which has constitnted the solar = at tem for the most part an orderly arrangethent of harge orbs moving throuzh spheres and thaz in all things independent?  enstom in France, during severe winters, or in times of distruss cansed hy stagnation of trade, to open temporary Workshops, in order to siveemployment to mechanics who were ont of work. These workshops were called Atelzers de Charite, until 184s, when the provisional goverament of the republic reopened a vast number of these cetablishments ander the name of A. They wore noder the control of a department called "" The womealt, however, Gadly organized, and failed calamitonsly. The primeiple on which they were condscted was, that every workmat shonld have a living provided for him on a fixed seale. Thond have a living provided for was, that workmen soon left private employers, and entered the national workshops. The nombers who flocked in soon became alarming. More than lue.tho men enrolled themselves, and insnbordinationsoon begin to show itself. Dasiger was imminent, and the Nat which became the pretext for the terrible iosnrrection which ensingnined Paris in Inne, 1548 .
